*Actor Networks of Planning* Yvonne Rydin, Laura Tate, 2016-02-12 Planning is centrally focused on places which are significant to people including both the built and natural environments In making changes to these places planning outcomes inevitably benefit some and disadvantage others It is perhaps surprising that Actor Network Theory ANT has only recently been considered as an appropriate lens through which to understand planning practice This book brings together an international range of contributors to explore such potential of ANT in more detail While it can be thought of as a subset of complexity theory given its appreciation for non linear processes and responses ANT has its roots in the sociology of scientific and technology studies ANT now comprises a rich set of concepts that can be applied in research theoretical and empirical It is a relational approach that posits a radical symmetry between social and material actors or actants It suggests the importance of dynamic processes by which networks of relationships become formed shift and have effect And while not inherently normative ANT has the potential to strengthen other more normative domains of planning theory through its unique analytical lens However this requires theoretical and empirical work and the papers in this volume undertake such work This is the first volume to provide a full consideration of how ANT can contribute to planning studies and suggests a research agenda for conceptual development and empirical application of the theory
