Risk and Protective Factors in the Natural History of Autoimmunity Christine Gibson Parks, Esther Erdei, Frederick Miller, 2026-01-12 Growing evidence shows preclinical autoimmunity among individuals who later develop clinical autoimmune diseases Autoimmunity in the general population is not uncommon while autoimmune diseases are infrequent and little is known about why some people with autoantibodies develop disease and others do not A better understanding of risk and protective factors for preclinical autoimmunity and the natural history of autoimmunity may provide insights into the development and prevention of autoimmune diseases Recent studies have identified trends in autoantibody prevalence and associated characteristics such as age gender and environmental exposures Interpretation of these findings limited by a lack of knowledge on the natural history of autoimmunity in healthy individuals as well as factors that may later impact the development of disease among autoantibody positive individuals This Research Topic Risk and Protective Factors in the Natural History of Autoimmunity welcomes submissions on all aspects of this continuum including Original Research and Review articles to help address this question especially those with the following focus 1 Natural history of autoantibodies and other self reactive immune components in those who do not and those who do develop an autoimmune disease o Human populations animal models and

other experimental research o How do immunologic assays and their advantages and disadvantages impact the detection and definitions of self reactive immune components o IgM isotype vs IgG isotype serum reactivities of various autoantigens o Natural autoantibodies anti idiotypes other autoimmune biomarkers o The roles of autoantibody titers polyreactivities and their changes over time 2 Risk and protective factors for autoimmunity o Age sex gender reproductive and hormonal factors o Factors contributing to seroconversion or seroreversion o The intersection of genetic environmental and epigenetic factors o Infections both acute and chronic including latent viral infections e g EBV and CMV and underlying alterations in IFN pathways and h pylori o New statistical models to understand immune function dysfunction pathways o Novel exposures mixtures interactions of multiple factors life course exposures o Role of the microbiome and mucosal origins hypothesis o Xenobiotic including endocrine disruptors and industrial chemicals pharmaceutical lifestyle and nutritional factors 3 Autoimmunity associated with other disorders including o Allergy atopy and associated diseases e g asthma dermatitis o Alzheimer s dementia Parkinson s disease o Cancer including certain ANA staining patterns such as DFS70 LEDGF o Cardiovascular disease e g anti cardiolipin responses o Pro inflammatory auto inflammatory conditions This topical collection is well suited to research and reviews that advance the current scientific frontiers to better understand the natural history and determinants of autoimmunity including the complex role and interactions of genetic and environmental factors Simple genetic association studies case reports and case series are not encouraged The Interplay Between Immune Activation and Cardiovascular Disease During Infection, Autoimmunity and Aging: The Role of T Cells Marta Catalfamo, Sara Ferrando-Martinez, Eva Reali, 2021-08-25 *Multi-systemic Auto-immune Diseases* Louis Kater, Harold Baart de la Faille, 1995 The views of a group of specialists on multi systemic auto immune diseases are brought together in this book which describes a selection of the diseases according to what has been called an integrated approach The volume includes descriptions of the clinical picture histology laboratory work up necessary for diagnosis differential diagnosis clarification of the mechanisms operative in pathophysiology specific guidelines for application of immunological laboratory investigations and practical approaches and advice for therapy It also gives personal views of the contributors as to which regimen to recommend in a certain situation internal medicine dermatology rheumatology neurology or immunology *Environmental Health Perspectives* ,1993 **Autoantibodies and Autoimmunity** Kenneth Michael Pollard, 2006 Address all aspects of the biology of autoantibodies in a single volume including a discussion of immunology experimental models clinical aspects and the use of autoantibodies as probes in molecular and cellular biology The editor has assembled a team of authors to report on the latest research technologies and applications Following an introductory chapter the book goes on to cover such topics as cellular mechanisms of autoantibody production clinical and diagnostic usefulness in human disease and animal models used to study the elicitation of autoantibodies The whole is rounded off with a look at future perspectives *Autoimmunity* M.
