Arduino shows you how to write properly structured programs instead of just downloading other people's code. Projects have been reworked to provide additional features and the book has been restructured to offer a step-by-step learning process that is as clear and visually pleasing on handheld devices as it is on paper. Full color is used throughout. As before, *Make Electronics* begins with the basics. You'll see for yourself how components work and what happens when they don't. You'll short out a battery and overheat an LED. You'll also open up a potentiometer and a relay to see what's inside. No other book gives you such an opportunity to learn from real-life experiences. Ultimately, you will build gadgets that have lasting value and you'll have a complete understanding of how they work. From capacitors to transistors to microcontrollers, it's all here. Hans Camenzind, inventor of the 555 Timer, the world's most successful integrated circuit chip, said that "This is teaching at its best" when he reviewed the first edition. Now the second edition offers even more.

PC-based Instrumentation and Control Michael H. Tooley, 1995-03-03 Explains using real working proven circuit examples how to select and configure a control system based on readily available software and hardware. Representative software routines in a variety of languages including 8086 assembler, BASIC, and C are included.
