## **Subtech 91 Back To The Future:**

**SUBTECH '91** Society for Underwater Technology (SUT),2012-12-06 The concept of using flexible reelable pipe to transport liquids gases and vapours is not a new one As early as the 1940s a steel braided elastomeric pipeline was developed for the Allied Forces in order to transport fuels to support the Normandy Beachheads In fact the longest flexible pipeline ever constructed is likely to be that laid across the English Channel as part of Operation Pluto The methodology used to handle and instal such pipe is also not new Ellis 1943 London in an early patent specification identifies three basic objectives for a flexible pipelining method These are prefabrication of the pipe onshore coiling of the pipe on suitable drums or reels and using such reels to lay pipe from anchored or motorised barges The design concept for flexible pipe is also not a new invention given that flexible hoses and umbilicals have been in service for more than sixty years A break through was however achieved by the French Institute of Petroleum in the early 1970s when they developed an improved steel reinforced pipe structure having a high axial loading capacity which utilised corrosion and hydrocarbon resistant polymers to extend pipe service lifetime This early pipe design utilised established cable making techniques to apply steel armour and axially and radially reinforce alternating layers of polymer sheaths The pipe was primarily developed as a flowline for use in static seabed applications

*Wave Kinematics and Environmental Forces* Society for Underwater Technology (SUT),2013-03-14 In determining the response of offshore structures it is of utmost importance to determine in the most correct manner all factors which contribute to the total force acting on these structures Applying the Morison formula Morison et al 1950 to calculate forces on offshore slender structures uncertainties related to the understanding of the wave climate the hydrodynamic force coefficients and the kinematics of ocean waves represent the most important contributions to the uncertainties in the prediction of the total forces on these structures Haver and Gudmestad 1992 Traditional calculation of forces on offshore structures involves the use of regular waves with the following non linearities incorporated use of regular wave theories incorporating higher order terms use of Morison equation having a nonlinear drag term inclusion of the effect of the free surface by integrating all contributions to total forces and moments from the sea floor to the free surface of the waves In order to describe the sea more realistically the ocean surface is to be described as an irregular sea surface represented by its energy spectrum The associated decomposition of the sea surface is given as a linear sum of linear waves The total force is found by integrating the contribution from all components in the wave spectrum to the free surface The kinematics of each component must therefore be determined

Aspect '94 Society for Underwater Technology (SUT),2012-12-06 Aspect 94 is the most up to date and comprehensive assessment of the present and future of the pipeline systems industry It comprises papers from leading experts in all areas of pipeline engineering and technology As this book shows the last few years have seen great strides forward in the field of subsea pipelines Deepwater pipelines long distance pipelines and complex systems transporting hydrocarbons and fluids to and from marginal field subsea wellheads and
