## **The Future Of Air Power:**

**The Future of Air Power** Neville Brown, 2021-05-30 Air power has been one of the key elements in modern warfare This book first published in 1986 analyses the likely changes to this key role as military technology and strategic thinking evolve It begins with the history and present status of air power and assesses technical developments and then discusses the character of future warfare and its implications for planes and helicopters in land and sea campaigns It also analyses issues like tactical air mobility the vulnerability of airfields aerial mass destruction electronic warfare and developments in NATO and Warsaw Pact It concludes with an overview of the likely role of airpower in future warfare *The Future of Air Power in the Aftermath of the Gulf War* Robert L. Pfaltzgraff, Richard H. Shultz, 1992 This collection of essays reflects the proceedings of a 1991 conference on The United States Air Force Aerospace Challenges and Missions in the 1990s sponsored by the USAF and Tufts University The 20 contributors comment on the pivotal role of airpower in the war with Iraq and address issues and choices facing the USAF such as the factors that are reshaping strategies and missions the future role and structure of airpower as an element of US power projection and the aerospace industry s views on what the Air Force of the future will set as its acquisition priorities and strategies The authors agree that aerospace forces will be an essential and formidable tool in US security policies into the next century The contributors include academics high level military leaders government officials journalists and top executives from aerospace and defense contractors *Airpower, Afghanistan, and the Future of Warfare: An Alternative View* Craig D. Wills, 2010-04-19 The author argues that the 20th century argument between air and ground proponents has changed significantly since the Gulf War and that it comes down to the relative importance of the ground or air in the mix It is more than just using air as a supporting component to the ground forces if this is true current force organization and employment are adequate However if the air predominates in combat operations then as Wills puts it in his first chapter joint operations doctrine needs to be rethought A changed balance will affect the military at every level force structure organization weapons acquisition doctrine and training Colonel Wills was the operations officer of the 493d Fighter Squadron Grim Reapers at Royal Air Force Lakenheath United Kingdom Originally published by Air University Press *The Airpower Advantage in Future Warfare: The Need for Strategy* Colin S. Gray, 2012-08-04 The U S has long suffered from a serious strategy deficit In short there is a general crisis of strategic comprehension a lack of agreement on the most effective organizing ideas Airpower is by no means lonely in suffering from strategic theoretical uncertainty The study argues that the United States needs a theory of war and warfare It claims that future warfare will be diverse and that the tactical operational and strategic value of airpower must always be situational A coherent theory of employment for all of airpower s capabilities not only the kinetic is needed Airpower s potential utility lies within a spectrum of possibilities and is dependent on context The study advises frank recognition of airpower s situational limitations Dr Colin S Gray is Professor of International Politics and Strategic Studies at the University of Reading in England

The United States has long suffered from a serious strategy deficit For so long as Americans short change the strategic function the leverage of US airpower must be much less than its potential The study argues strongly for the rigorous application of strategic discipline to all airpower activity not only the kinetic Even today more than 100 years into the air age many people are inappropriately committed to the view that either landpower or airpower must be the dominant force in warfare In fact extensive historical experience demonstrates that the relative utility of airpower is powerfully situational Futurology is a necessary art not science but its record of prescience is poor With respect to science and technology and to politics our ability to see into the future is completely unreliable Technical innovation lies at the heart of the case for privileging airpower in the American way of war but such innovation comprises only one of warfare s seven vital contexts The sheer complexity of war and warfare renders prediction technological and other a high risk activity The contexts of war and warfare are 1 political 2 societal cultural 3 economic 4 technological 5 military strategic 6 geographical and 7 historical The major purpose of the study is to contribute to some reduction in America s strategy deficit A common and serious error is the belief that airpower theory is uniquely immature and contested Currently it so happens literally every dimension of US military power is fraught with conceptual uncertainty Specifically landpower knows it is challenged by a transforming airpower seapower is suffering from a conceptual and strategic crisis as it strives in part to reinvent itself for a world wherein it faces no first class naval enemies but in which it will have to devise effective answers to anti access tactics by littoral states spacepower and cyberwar are utterly bereft of strategic theory tailored for their realms of behavior and nuclear weapons are almost in conceptual limbo challenged by the radical improvements in precision conventional weapons Airpower is in no better or worse condition than the others In short there is a general crisis of strategic comprehension a lack of agreement on the most effective organizing ideas Airpower is by no means lonely in suffering from strategic theoretical uncertainty The study argues that the United States needs a theory of war and warfare It claims that future warfare will be diverse and that the tactical operational and strategic value of airpower must always be situational A coherent theory of employment for all of airpower s capabilities not only the kinetic is needed Airpower s potential utility lies within a spectrum of possibilities and is dependent on context Looking to the future it would be an error to assume that the United States will enjoy the benefits of air dominance as of right Capable enemies who have studied the US style in warfare would be hugely motivated to reduce the American airpower advantage Such a reduction might be achieved not only by air defense but also by contesting the uses of space or cyberspace Near exclusive focus upon the contributions airpower can make to warfare is a mistake Airpower will generate strategic effect in time of peace and crisis also We should not forget the continuing relevance of the concept and attempted practice of deterrence The study advises frank recognition of airpower s situational limitations Those limitations are less than they used to be but some remain simply as a consequence of the physical realities of flight

with reference to a conflict that must relate ultimately to decisions and behavior on land It is necessary to acknowledge and exploit the technological tactical and operational fact that the balance of relative influence at least in regular warfare has shifted very noticeably in favor of airpower [Future of U. S. Airpower on the Korean Peninsula](#) Bruce E. Bechtol,2008-10 US military support to the Republic of Korea ROK remains critical to peace and stability Author Dr Bruce E Bechtol Jr details constraints faced by the army of the Democratic People s Republic of Korea DPRK in any attempt to invade the ROK Although much of the surface based defense capability in the South is transitioning to the ROK army a strong U S airpower presence demonstrates U S commitment to Korean security counterbalances the DPRK s offensive systems and deters war Illustrations

[Airpower Journal](#) ,1998 **The Future of Air Power in the Aftermath of the Gulf War** ,1992 Air University is proud to have joined the Air Staff and the International Security Studies Program of the Fletcher School of Law and Diplomacy at Tufts University in sponsoring the April 1991 conference on aerospace challenges and missions that produced this collection of essays Written by a distinguished group of specialists from academia the military government business and the media these essays examine American national security policy and Air Force issues from a variety of perspectives Aside from their remarkable perceptiveness the contributions of the authors are especially timely because they address the pivotal role of air power in the war with Iraq The essays leave no doubt that the employment of both established and innovative methods of air combat in that crisis has important implications for the global security environment of the future In that sense this book provides a foundation for evaluating the complex policy challenges that we face in the 1990s and into the next century

**The Future of NATO Airpower** Justin Bronk,2020-05-31 Airpower remains the cornerstone of NATO s military advantage so maintaining the ability to win air superiority over peer opponents in a conflict is key to long term deterrence stability in both Europe and the Pacific This Whitehall Paper examines the various modernisation and future capability development efforts being undertaken within NATO and analyses the major threat systems and overall modernisation trends of the West s main peer competitors Russia and China US airpower capability development efforts are increasingly focused on countering the growing challenge from the Chinese military in the Pacific To meet this challenge the Pentagon is planning to transform the way it operates across all domains over the next 15 years New platforms weapons systems and increasing automation of command and control threaten to leave NATO allies behind Current acquisition and modernisation plans of European air forces may eventually close the capability gap with current US theatre entry standard capabilities but by then the US will have leapt ahead once more Furthermore many of the airpower capabilities which the US is pursuing for the Pacific theatre are significantly less relevant for the demands of deterrence against Russia in Europe Given continuing dependence on US enablers on the part of other NATO members a significant divergence in capability plans threatens to undermine crucial Alliance interoperability if not recognised and managed early [Our World](#) Herbert Sherman Houston,1924 [On Future Warfare](#) John Frederick Charles Fuller,1928 **The Air Power Historian** ,1957 [Back to](#)
