Tuberous Sclerosis Complex:

Tuberous Sclerosis Complex Manuel Rodriguez Gomez, Julian R. Sampson, Vicky Holets Whittemore, 1999-07-15
Tuberous Sclerosis is a genetic disease characterized by lesions of the skin and central nervous system seizures and sometimes severe mental retardation. Infants with this disease may appear overactive, autistic, or socially impaired. Because tuberous sclerosis involves abnormal cellular differentiation, aberrant neuronal migration, and excessive cell proliferation, this thoroughly revised edition will be of interest to a wide range of professionals involved in the study of biological mechanisms underlying many genetically determined neurological disorders.

Tuberous Sclerosis Complex Paolo Curatolo, 2003-01-10
Correlating new genetic data and basic science regarding tuberous sclerosis, this collection covers clinical presentation, reviews history and current diagnostic criteria, and notes recent advances in neuropathology, molecular genetics, and neurobiology. Tuberous sclerosis incorporates malformations characterized by disturbances in cellular differentiation and growth. It appears with a complex association of different neurological phenotypes, including seizures, cognitive impairments, and autism.

Tuberous Sclerosis Complex David J. Kwiatkowski, Vicky Holets Whittemore, Elizabeth A. Thiele, 2011-08-24
The only comprehensive overview of the molecular basis and clinical features of the genetic disorder tuberous sclerosis, which affects approximately 50,000 people in the US alone. Special focus is placed on novel insights into the signal transduction pathways affected by the disease, as well as genotype-phenotype correlations, while existing and potential therapies are also discussed in depth. The editors are leading experts in research and treatment of the disease, as well as the Vice President of the Tuberous Sclerosis Alliance, the only voluntary health organization for TSC in the US.

TUBEROUS SCLEROSIS COMPLEX: A CASE REPORT., 2017
BACKGROUND AND AIMS The tuberous sclerosis complex (TSC) is a genetic disorder with autosomal dominant inheritance caused by the mutation on TSC1 or TSC2. The frequency is estimated at 1/6000. The

most common clinical manifestations include skin abnormalities cerebral malformations renal angiomyolipomas and cardiac rhabdomyomas pulmonary lymphangiomyomatosis Greater morbidity and mortality is determined by the involvement of brain functions and a high prevalence of refractory epilepsy METHODS Clinical case and literature review RESULTS A 5 months old patient was referred due to abnormal movements compatible with infantile spasms At physical exam he had white patches hypomelanotic macules and fibrous plaques on occipital scalp area TSC was suspected and cranial MRI was performed that confirms the presence of cortical tubers and subependymal nodules The EEG showed multiple epileptiform paroxysms of occipital predominance Doses up to 75 mg kg d of Vigabatrin were required for seizures control and EEG normalization The echocardiogram showed two rhabdomyomas undiagnosed in prenatal period and the electrocardiography was compatible with WPW syndrome preexcitation syndrome An abdominal MRI the renal function and the ophthalmology exam were normal CONCLUSIONS TSC1 and TSC2 genes encode hamartin and tuberlin proteins which form a complex controlling mTOR pathway essential for cell growth The different manifestations of the disease require a multidisciplinary management from epilepsy to the of an eventual failure renal or respiratory treatment Some features of epilepsy as early age at diagnosis the presence of infantile spasms the existence of various types of crisis and the poor response to treatment have been correlated with an increased risk of disability

Mutational Analysis of Cell Types in Tuberous Sclerosis Complex (TSC). ,2007 Tuberous sclerosis complex TSC is an autosomal disorder resulting from mutations in the TSC1 or TSC2 genes that is associated with epilepsy cognitive disability and autism TSC1 TSC2 gene mutations lead to developmental alterations in brain structure

known as tubers in over 80% of TSC patients Loss of TSC1 or TSC2 function in tubers results from biallelic TSC gene inactivation and leads to activation of the mTOR cascade as evidenced by phosphorylation of ribosomal S6 protein P S6 We demonstrate that there are numerous cytoarchitectural abnormalities in non tuber brain areas in post mortem TSC brain Many of these regions exhibit aberrant phosphorylation of the ribosomal S6 protein phospho S6 or P S6 a marker for enhanced mTOR signaling We find P S6 expression in cortex as well as subcortical regions including the cerebellum Single cell mutational analysis of these regions reveals somatic missense mutations suggesting that even though these lesions are distinct from tubers they arise by biallelic gene inactivation We also identify a new marker protein GFAP delta that is co expressed in tubers and subependymal giant cell tumors

Neurobiology of Disease Michael V Johnston, Harold P Adams, Ali Fatemi, 2016-08-18 The second edition of Neurobiology of Disease includes nearly 200 articles surveying all major disorders of the nervous system in both adults and children focusing on relevant diagnosis and treatments from the perspective of cutting edge clinical and basic neurobiological research Akin to an encyclopedia of every neurologic disorder this comprehensive work is ideal for graduate and medical school students residents and candidates preparing for their board certification examinations Each chapter is illustrated with detailed figures supplemented with descriptive and diagnostic tables and thoroughly referenced for further investigations The book s editors Michael V Johnston Harold P Adams Jr and Ali Fatemi bring their unique expertise in clinical and research neurology to the overall scope of this work To further enhance the scope and quality of this new edition the following Section Editors provided oversight of their respective sections Movement Disorders Joel Perlmutter Washington University Dementias David Knopman Mayo Clinic Motorneuron Diseases Merit Cudkowicz Massachusetts General Hospital Paroxysmal Disorders Solomon Moshe Albert Einstein College of Medicine Pediatric Neurology and Developmental Disorders Tanjala Gipson and Deepa Menon Kennedy Krieger Institute and Johns Hopkins University Neuroimmunological Diseases Carlos Pardo Villamizar Johns Hopkins University Cerebrovascular Diseases Harold P Adams Jr University of Iowa Peripheral and Autonomic Nervous System Disorders and Pain Nicholas Maragakis Johns Hopkins University Neoplastic and Paraneoplastic Diseases Lisa DeAngelis Memorial Sloan Kettering Cancer Center Infectious Diseases of the Nervous System Karen L Roos Indiana University Sleep Disturbances Mark Dyken University of Iowa Substance Abuse and Toxicology Disorders Barry E Kosofsky Weill Cornell University Medical Center Neurologic Manifestations of Medical Disorders John C Probasco Johns Hopkins University

Superimposed Mosaicism in Tuberous Sclerosis Complex: a Key to Understanding All of the Manifold Manifestations? Rudolf Happle,Antonio Torrelo,2020

[Tuberous Sclerosis Complex](#) Trina Basu,2018 Tuberous Sclerosis Complex TSC is an autosomal dominant multisystem spectrum disorder that affects approximately 1 in 6 000 births The disorder is characterized by the development of benign tumors hamartomas that grow throughout the body including the brain heart kidney lungs eyes and skin Approximately 50% of TSC patients exhibit autism spectrum disorder ASD and over 85% of TSC patients develop epilepsy within the first year of life TSC is caused by a loss of function mutation in either TSC1 or TSC2 genes encoding hamartin and

tuberin respectively Hamartin and Tuberin form a complex to negatively regulate the mechanistic Target of Rapamycin Complex 1 mTORC1 function Among other roles in the brain mTORC1 regulates post synaptic protein translation that has been implicated in activity dependent synaptic plasticity An inactivating mutation in either TSC1 or TSC2 results in constitutively active mTORC1 signaling which contributes to the neurological manifestations in TSC patients Many studies have focused on attenuating hyperactive mTORC1 to normalize downstream protein translation and to restore typical synaptic plasticity and behavior in rodent models of TSC This thesis explores the epigenetic regulation of altered neuroplasticity and behavior in the TSC2 mouse model In Part I of this thesis I demonstrate that increased HDAC function drives aberrant synaptic plasticity and a reduced seizure threshold in TSC2 mice I show that pharmacological attenuation of HDAC activity evokes normal synaptic plasticity and increases latency to flurothyl induced seizures in TSC2 mice We have previously shown that increased Extracellular Regulated signaling Kinase 1 2 ERK1 2 activity bypasses the canonical mTORC1 signaling cascade to drive altered synaptic plasticity in the TSC2 mouse hippocampus In Part II of my thesis I provide evidence to support the hypothesis that increased HDAC activity in TSC2 mice promotes enhanced ERK1 2 signaling through repression of Dual Specificity Phosphatase 6 DUSP6 a negative regulator of ERK1 2 In summary my thesis suggests a novel mechanism whereby altered synaptic plasticity and seizure susceptibility in the TSC2 mouse model may be under epigenetic regulation The findings from these studies suggest alternative targets for therapeutic intervention in TSC patients

The book delves into Tuberous Sclerosis Complex. Tuberous Sclerosis Complex is an essential topic that must be grasped by everyone, ranging from students and scholars to the general public. This book will furnish comprehensive and in-depth insights into Tuberous Sclerosis Complex, encompassing both the fundamentals and more intricate discussions.

1. The book is structured into several chapters, namely:

- Chapter 1: Introduction to Tuberous Sclerosis Complex
- Chapter 2: Essential Elements of Tuberous Sclerosis Complex
- Chapter 3: Tuberous Sclerosis Complex in Everyday Life
- Chapter 4: Tuberous Sclerosis Complex in Specific Contexts
- Chapter 5: Conclusion

2. In chapter 1, the author will provide an overview of Tuberous Sclerosis Complex. This chapter will explore what Tuberous Sclerosis Complex is, why Tuberous Sclerosis Complex is vital, and how to effectively learn about Tuberous Sclerosis Complex.

3. In chapter 2, this book will delve into the foundational concepts of Tuberous Sclerosis Complex. The second chapter will elucidate the essential principles that need to be understood to grasp Tuberous Sclerosis Complex in its entirety.

4. In chapter 3, this book will examine the practical applications of Tuberous Sclerosis Complex in daily life. The third chapter will showcase real-world examples of how Tuberous Sclerosis Complex can be effectively utilized in everyday scenarios.

5. In chapter 4, the author will scrutinize the relevance of Tuberous Sclerosis Complex in specific contexts. The fourth chapter will explore how Tuberous Sclerosis Complex is applied in specialized fields, such as education, business, and technology.

6. In chapter 5, this book will draw a conclusion about Tuberous Sclerosis Complex. The final chapter will summarize the key points that have been discussed throughout the book.

The book is crafted in an easy-to-understand language and is complemented by engaging illustrations. This book is highly recommended for anyone seeking to gain a comprehensive understanding of Tuberous Sclerosis Complex.
