**Subject Guide to Books in Print**, 1997      **Biomolecular Structure and Function** Paul Agris, 2012-12-02

Biomolecular Structure and Function covers the proceedings of the 1977 Cellular Function and Molecular Structure Biophysical Approaches to Biological Problems symposium. It summarizes the application of several biophysical techniques to molecular research in biology. This book starts by describing the use of deuterium labeled lipids as monitors of the degree of organization of membrane lipids. It also describes the use of carbon 13 labeled lipids as indicators of molecular mobility. It explains the lipid protein interactions involving two integral membrane proteins: mitochondrial cytochrome oxidase and calcium dependent ATPase of muscle sarcoplasmic reticulum. The book goes on to present NMR studies on the organization and conformation of phospholipids, chloroplast membranes and erythrocyte membranes. It also presents the ESR study of spectrin phospholipid associations. It discusses the use of fluorescence probes, electrokinetics, neutron diffraction and ion theory studies of phospholipid protein association, hormone, disease and senescence effects on prokaryotic and eukaryotic cells. Moreover, this book presents the experiments and phosphorus 31 NMR methodology to simultaneously monitor the intracellular pH and phosphate metabolism in a beating heart, functioning kidney or an intact living microorganism. This book then describes physical probing of intracellular fluidity and structural changes attending tissue or cell cycles. It also relates relatively narrow lines in the hydrogen 1 NMR spectrum of the extremely viscous complex of the muscle protein troponin and highly polymerized tropomyosin. Structure function studies of fibrous proteins such as collagen, actin and myosin and active site analysis of enzymes are also presented. Finally, a wide variety of methodologies and technologies is exemplified. This includes proton, carbon, fluorine, phosphorus and lithium NMR spectroscopy, spin labeling and EPR spectroscopy, chemical studies, light scattering and fluorescence and electron microscopy.

Comprehensive Chemometrics Steven Brown, Roma Tauler, Beata Walczak, 2020-05-26. Comprehensive Chemometrics Second Edition Four Volume Set features expanded and updated coverage along with new content that covers advances in the field since the previous edition published in 2009. Subject of note include updates in the fields of multidimensional and megavariate data analysis, omics data analysis, big chemical and biochemical data analysis, data fusion and sparse methods. The book follows a similar structure to the previous edition using the same section titles to frame articles. Many chapters from the previous edition are updated but there are also many new chapters on the latest developments. Presents integrated reviews of each chemical and biological method examining their merits and limitations through practical examples and extensive visuals. Bridges a gap in knowledge covering developments in the field since the first edition published in 2009. Meticulously organized with articles split into 4 sections and 12 sub sections on key topics to allow students, researchers and professionals to find relevant information quickly and easily. Written by academics and practitioners from various fields and regions to ensure that the knowledge within is easily understood and applicable to a large audience.
