Technology Of Food Product Development:

An Integrated Approach to New Food Product Development Howard R Moskowitz, I. Sam Saguy, Tim Straus, 2018 Food Product Development Mary D. Earle, R. L. Earle, Allan M. Anderson, 2001 Product development from refining an established product range to developing completely new products is the lifeblood of the food industry. It is however a process fraught with risk often ending in failure. What are the keys to making the process a success? Based on a wealth of experience gathered over 40 years, Food Product Development provides the answers. Filled with examples and practical suggestions and written by a distinguished team with unrivalled academic and industry expertise, this book will be an essential guide for R D and product development staff and all managers concerned with this key issue throughout the food industry. New Food Product Development Holger York Toschka, 2025-03-31 With a new subtitle to reflect its global perspective and a new author, this book continues the mission of earlier editions to describe the stages of food development in detail, beginning with sources of ideas and moving through development, final screening, and introduction into the marketplace. Every chapter contains one or more case studies. New chapters address the tools available for the food industry and manufacturers to select, sharpen, fine tune, and support new food product launches. More attention is given to the influence of global concerns about the deteriorating environment and here particularly the role and responsibility of the food industry and those working on new food products. **Key Features:** This edition adds the perspective from single product or product range development to the overall portfolio management. This edition explains strategies for successful management of unpredictable, uncertain, and complex conditions in new food product development. NFPD Chapters contain one or more case studies to add pedagogy for students and practical applications for professionals. More focus is given to the role and responsibilities of research and development R D in innovation management. Two chapters are used to predict the future direction for NFPD. This book can serve as the core textbook for the capstone new food product development course typically found in the food science curriculum and is of equal value to early career food scientists finding themselves in a multidisciplinary team working on the creation of a new food product. Creating New Foods Mary Earle, Mary D. Earle, Richard Earle, 1998-01-01 This text is based on the belief that a food product development project is based on the company and the environment of the company. There is an overall Product Development Process which can be used as a framework, but the activities, actions, and decisions are defined by the company's knowledge, abilities, and resources, the product's level of innovation, technology, and consumer involvement, the risk taking in the company and the environment, and the level of scientific and technological knowledge available. Consumer-Led Food Product Development Hal MacFie, 2007-06-30 Consumer acceptance is the key to successful food products. It is vital, therefore, that product development strategies are consumer led for food products to be well received. Consumer led food product development presents an up to date review of the latest scientific research and methods in this important area. Part one gives the reader a general introduction to factors affecting consumer food choice.

Chapters explore issues such as sensory perception culture ethics attitudes towards innovation and psychobiological mechanisms Part two analyses methods to understand consumers food related attitudes and how these methods can be effectively used covering techniques such as means end chains and the food related lifestyle approach The final part of the book addresses a wide variety of methods used for consumer led product development Opportunity identification concept development difference testing and preference trials are discussed as well as the use of techniques such as just about right scales and partial least squares methods Written by an array of international experts Consumer led food product development is an essential reference for product developers in the food industry Introduces the factors affecting consumer food choice Explores issues such as sensory perception culture and ethics Analyses methods to understand food related attitudes
