The Ocean Laboratory:

The Ocean Laboratory Athelstan Spilhaus, 1967 Surveys oceanographic research as a foundation for engineering discussing the methodology equipment and application of marine study **The Ocean Laboratory** Antony Adler, 2014 In framing the history of field sciences most historians emphasize terrestrial sites rather than marine ones But to ignore marine spaces is to omit an extensive geography to which the abstract notion of the field has also been applied While the importance of laboratories as a space for scientific work has been well established by historians and though there has been a growing body of recent scholarship on the history of field science the link between laboratories ships museums and the development of oceanography as a field science has yet to be fully explored Tracing this history sets the history of oceanography within the larger history of science in the field and thereby offers to the history of science a contribution which bridges two subfields the history of the development of laboratory and field sciences and the history of the exploration of the marine environment A central theme of this project is the shifting conception of the research vessel over the period from ca 1830 to present as it underwent a change from the ship as instrument to the ship as laboratory and finally in its most recent incarnation to the ship as invisible technician operating within an ocean transformed into credible scientific space Beginning with a description of expeditionary science at the turn of the nineteenth century this dissertation charts a gradual re centering of spaces of scientific analysis from the metropole to the field via the marine station and finally the research vessel In doing so it examines the social political and cultural context in which these shifts took place and reveals an emerging scientific and political discourse equating international cooperation and progress in marine science These were both goals of Prince Albert 1st of Monaco his scientific program and the oceanographic institutions he founded helped permanently link these dual agendas Thus this study sheds light on the social and cultural processes involved in the emergence of global sciences framed in terms of large scale systems both physical and political Furthermore by tracing the development of oceans as scientific spaces this work demonstrates how the idea of a Pacific World with roots in nineteenth century expeditionary science contributed to the self conscious geopolitical construction of this concept in the interwar period Public proclamations about the Pacific World along with the development of museum exhibits focused on marine science and interpreting the results of oceanographic expeditions demonstrate the ways in which popular culture and politics interacted with the cultures of marine science Hence in the twentieth century world s fairgrounds on the west coast of the United States became an important venue for popularizing large scale science and presenting appeals for scientific internationalism in the Pacific **Ocean Laboratory** Athelstan Spilhaus, 1967-01-01 **GSFC'S Laboratory for Oceans** ,1987 *Proceedings of the Ocean Drilling Program* Ocean Drilling Program, 1994 Vol 174AX bound with *Proceedings of the Ocean Drilling Program Scientific results* Vol 174A **The Living Ocean Lab Manual** Claudia Benitez Nelson, Michelle Hardee, 2014-12-26

Proceedings of the Ocean Thermal Conversion (OTEC) Biofouling and Corrosion Symposium, October 10-12,

1977, Seattle, Washington ,1978 50 Years of Ocean Discovery National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Ocean Studies Board, 2000-01-03 This book describes the development of ocean sciences over the past 50 years highlighting the contributions of the National Science Foundation NSF to the field's progress. Many of the individuals who participated in the exciting discoveries in biological oceanography, chemical oceanography, physical oceanography, and marine geology and geophysics describe in the book how the discoveries were made possible by combinations of insightful individuals, new technology, and in some cases serendipity. In addition to describing the advance of ocean science, the book examines the institutional structures and technology that made the advances possible and presents visions of the field's future. This book is the first ever documentation of the history of NSF's Division of Ocean Sciences, how the structure of the division evolved to its present form, and the individuals who have been responsible for ocean sciences at NSF as rotators and career staff over the past 50 years. **The Near-Surface Layer of the Ocean** Fedorov, Ginzburg, 2013-12-19 This book treats the structure and variability of basic physical fields in a thin near-surface layer which responds quickly to all short-term and local fluctuations of atmospheric forcing and of radiative solar energy flux. The book contains up-to-date information on different phenomena and processes in this layer based on research conducted over time. *The Log* ,1936 **Education Series** ,1913 *Proceedings of the Ocean Drilling Program* Ocean Drilling Program, 1992 **Annual Report - Marine Biological Laboratory** Marine Biological Laboratory (Woods Hole, Mass.), 1889 **America's Ocean Wilderness** Gary Kroll, 2008 Examines a handful of famous ocean explorers and naturalists including Jacques Cousteau, Thor Heyerdahl, and Rachel Carson among others to demonstrate how their work helped shape the way many Americans would think about and interact with the ocean. **Scientific American** ,1910 Monthly magazine devoted to topics of general scientific interest. *Miscellaneous Studies in Agriculture and Biology* University of California, Berkeley, Albert Free Swain, Howard Brett Frost, George Francis McEwen, Frederic Theodore Bioletti, William Vere Cruess, Horace Denan Davi, 1919 **Contributions from the Zoological Laboratory of the University of Pennsylvania** University of Pennsylvania.
