# Latest Carbon Footprint

**Michael Seilmaier**

## **Latest Carbon Footprint:**

**Carbon Footprints as Cultural-Ecological Metaphors** Anita Girvan, 2017-10-10 Through an examination of carbon footprint metaphors this book demonstrates the ways in which climate change and other ecological issues are culturally and materially constituted through metaphor. The carbon footprint metaphor has achieved a ubiquitous presence in Anglo North American public contexts since the turn of the millennium yet this metaphor remains under examined as a crucial mediator of political responses to the urgent crisis of climate change. Existing books and articles on the carbon footprint typically treat this metaphor as a quantifying metric with little attention to the shifting mediations and practices of the carbon footprint as a metaphor. This gap echoes a wider gap in understanding metaphors as key figures in mediating more than human relations at a time when such relations profoundly matter. As a timely intervention this book addresses this gap by using insights from environmental humanities and political ecology to discuss carbon footprint metaphors in popular and public texts. This book will be of great interest to researchers and students of environmental humanities, political ecology, environmental communication and metaphor studies.

**The Environmental Impact of Sieben Linden Ecovillage** Andrea Bocco, Martina Gerace, Susanna Pollini, 2019-01-10 The Open Access version of this book available at <https://www.taylorfrancis.com/books/9780367145644> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license. Environmental impact assessment is widely taught and researched but rarely covers both lifestyle and building construction in a town or neighbourhood. This book provides a broad assessment of the environmental impact of the ecovillage Sieben Linden in Germany. The ecovillage was founded in 1997 and has a population of over one hundred people. This book shows how raising the awareness of individuals and adopting a consistent way of community living can be environmentally friendly. This applies both to everyday practices and the way the houses in the ecovillage are built. The tools used to measure the impact are Ecological Footprint and Carbon Footprint methodologies making use of indicators such as Primary Energy Intensity and Global Warming Potential. Despite the difficulties encountered by using standardised methodologies these research tools provide an overall assessment and have allowed comparisons with selected similar cases and general values from statistical sources. This book will be of great use to professionals and scholars in the fields of environmental impact assessment particularly at the town, district, city level and of city and ecovillage management. It will particularly appeal to those engaged in a Sustainable Development Goal 11 perspective as well as environmental policy makers at the local level.

**Current Trends in Environmental Psychology, volume 1, 2nd edition** Giuseppe Carrus, Eugenio De Gregorio, Frederica Caffaro, Sabine Pirchio, Lorenza Tiberio, 2023-07-18 This Research Topic is linked to the 3rd International Conference of Environmental Psychology ICEP 2021 to be held in Siracusa, Italy, 4-9 October 2021.
