## **Toolkit Circular Economy:**

**The Routledge Handbook of Waste, Resources and the Circular Economy** Terry Tudor, Cleber J.C.

Dutra, 2020-12-27 The Handbook introduces, contextualises, critiques and discusses a range of perspectives associated with the concept of the circular economy. These perspectives span an array of subjects including economics, environmental policymaking, sociology, environmental science, environmental and industrial engineering, management, international development and human geography. A fundamental underpinning of the Handbook is that it takes account of a wide range of sectors as well as geographical perspectives that incorporate both a Global North and Global South world context. This approach is crucial because it is only within such a holistic perspective that the circular economy concept can truly be examined. In addition, these issues are examined both from a theoretical as well as a practical perspective using real world case studies for illustration. Given its wide subject sectoral and geographical areas of focus, the Handbook should be of value not only for those undertaking research in the field of circular economy but also stakeholders involved in policymaking as well as decision making on the front line.

**EcoDesign and Sustainability II** Yusuke Kishita, Mitsutaka Matsumoto, Masato Inoue, Shinichi Fukushima, 2020-11-10 This book highlights cutting edge ecodesign research covering product and service design, smart manufacturing and social perspectives in ecodesign. Featuring selected papers presented at EcoDesign 2019 11th International Symposium on Environmentally Conscious Design and Inverse Manufacturing, it also includes diverse interdisciplinary approaches to foster ecodesign research and activities. In the context of Sustainable Development Goals (SDGs), it addresses the need for the manufacturing industry to design innovations for sustainable value creation, taking into account technological developments, legislation and consumer lifestyles. Further, the book discusses the concept of circular economy, which originated in Europe and aims to increase resource efficiency by shifting away from the linear economy. Focusing on product life cycle design and management, smart manufacturing, circular economy and business strategies, and providing useful approaches and solutions to these emerging concepts, this book is intended for both researchers and practitioners working in the broad field of ecodesign and sustainability.

**Circular Economy** Aldo Alvarez-Risco, Subramanian Senthilkannan Muthu, Shyla Del-Aguila-Arcentales, 2022-04-02 This book highlights ways to evaluate circular economy using global standard and footprints, the way global firms are using to ensure the measurement of the impact. It presents various case studies from different sectors with the efforts made to contribute to circular economy and at the same time its contribution to minimize carbon and water footprints.
