Trends In Apps Of Pure Mathematics Volume 2:

New Developments in Singularity Theory Dirk Wiersma, C.T.C. Wall, V. Zakalyukin, 2012-12-06 Singularities arise naturally in a huge number of different areas of mathematics and science As a consequence singularity theory lies at the crossroads of paths that connect many of the most important areas of applications of mathematics with some of its most abstract regions The main goal in most problems of singularity theory is to understand the dependence of some objects of analysis geometry physics or other science functions varieties mappings vector or tensor fields differential equations models etc on parameters The articles collected here can be grouped under three headings A Singularities of real maps B Singular complex variables and C Singularities of homomorphic maps *Recent Developments in Several Complex Variables. (AM-100), Volume 100* John Erik Fornaess, 2016-03-02 A classic treatment of complex variables from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks *Recent Developments in Thermomechanics of Solids* G. Lebon, 2014-05-04 The main objective of the contributions contained in this volume is to present the thermodynamic foundations of the response of elastic and dissipative materials In particular the governing equations of non linear thermoelasticity and thermoinelasticity as well as the basic properties of these equations as resulting from the primary assumptions of continuum thermodynamics are derived The global formulation of thermodynamics of continua is discussed A special attention is paid to the properties of the balance equations on a singular surface The possible forms of the second law of thermodynamics are discussed within the frame work of axiomatic thermodynamics Furthermore the thermodynamic requirements for different kinds of materials are examined The secondary purpose of the Course was to discuss some connections between rational and classical formulations of the principles of thermodynamics The present volume contains the texts of three of the four delivered Course lectures I hope it will constitute a useful source of information on the problems presented and discussed in Udine Special thanks are due to the International Centre for Mechanical Sciences whose direction encouraged us to prepare and to deliver the lectures **Index of Conference Proceedings Received, 1974-1978** British Library. Lending Division, 1980 **Developments in Theoretical and Applied Mechanics**, 1965 **The Kepler Conjecture** Jeffrey C. Lagarias, 2011-11-09 The Kepler conjecture one of geometry's oldest unsolved problems was formulated in 1611 by Johannes Kepler and mentioned by Hilbert in his famous 1900 problem list The Kepler conjecture states that the densest packing of three dimensional Euclidean space by equal spheres is attained by the cannonball packing In a landmark result this was proved by Thomas C Hales and Samuel P Ferguson using an analytic argument completed with extensive use of computers This book centers around six papers

presenting the detailed proof of the Kepler conjecture given by Hales and Ferguson published in 2006 in a special issue of Discrete Computational Geometry Further supporting material is also presented a follow up paper of Hales et al 2010 revising the proof and describing progress towards a formal proof of the Kepler conjecture For historical reasons this book also includes two early papers of Hales that indicate his original approach to the conjecture The editor s two introductory chapters situate the conjecture in a broader historical and mathematical context These chapters provide a valuable perspective and are a key feature of this work

Learning Mathematics in a Mobile App-Supported Math Trail Environment Adi Nur Cahyono,2018-07-19 This brief presents the results of a study on the development of the mobile app supported math trail program for learning mathematics This study is a part of the MathCityMap Project a project of the MATIS I Team from IDMI Goethe Universit t Frankfurt Germany that comprises math trails around the city that are supported by the use of GPS enabled mobile phone technology The project offers an activity that is designed to support students in constructing their own mathematical knowledge by solving the prepared mathematical tasks on the math trail and interacting with the environment including the digital environment The brief focuses specifically on the development of a model for a mobile app supported math trail programme and the implementation of this programme in Indonesia It offers both an empirical exploration of its implementation as well as critical assessment of students motivation in mathematics their own performance as well as teachers mathematics beliefs It concludes with a future forward perspective by recommending strategies for implementation in schools among the general public of the existing math trails including its supporting tool It also discusses strategies for developing and designing new trails and suggests further research in other geographical regions and contexts for continued project development and implementation

Learning Mathematics in a Mobile App Supported Math Trail Environment articulates an innovative and exciting future for integrating real mathematical tasks and geographic and digital environment into effective mathematics education

Topological Methods in Galois Representation Theory Victor P. Snaith, 1989-01-17 Written by one of the world's leading algebraic topologists this book introduces new techniques from topology into algebra addressing several topics in algebra which are unified by their connection with the representation theory of Galois groups Treatment is self contained addressing bilinear forms and local root numbers using techniques from cohomology theory homotopy and stable homotopy theory Snaith's innovative approach is likely to inspire many similar applications of the explicit Brauer induction theory Contains much original research of interest to algebraic topologists number theorists and group theorists
