Nigel Davies, Kerry Raymond, Jochen Seitz, 2012-12-06 Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate

Data Management Felix Gessert, Wolfram Wingerath, Norbert Ritter, 2020-05-15 The unprecedented scale at which data is both produced and consumed today has generated a large demand for scalable data management solutions facilitating fast access from all over the world As one consequence a plethora of non relational distributed NoSQL database systems have risen in recent years and today's data management system landscape has thus become somewhat hard to overlook As another consequence complex polyglot designs and elaborate schemes for data distribution and delivery have become the norm for building applications that connect users and organizations across the globe but choosing the right combination of systems for a given use case has become increasingly difficult as well To help practitioners stay on top of that challenge this book presents a comprehensive overview and classification of the current system landscape in cloud data management as well as a survey of the state of the art approaches for efficient data distribution and delivery to end user devices The topics

covered thus range from NoSQL storage systems and polyglot architectures backend over distributed transactions and Web caching network to data access and rendering performance in the client end user By distinguishing popular data management systems by data model consistency guarantees and other dimensions of interest this book provides an abstract framework for reasoning about the overall design space and the individual positions claimed by each of the systems therein Building on this classification this book further presents an application driven decision guidance tool that breaks the process of choosing a set of viable system candidates for a given application scenario down into a straightforward decision tree
