The Elementary Functions An Algorithmic Approach:

The Elementary Functions G. Albert Higgins, 1973 *Elementary Functions: an Algorithmic Approach* Theodore C. Burrowes, Sharon K. Burrowes, Sharon Yoder, 1974 Elementary Functions: Jean-Michel Muller, 2013-03-14 The elementary functions sine cosine exponentials logarithms are the most commonly used mathematical functions Computing them quickly and accurately is a major goal in computer arithmetic This book gives the theoretical background necessary to understand and or build algorithms for computing these functions presents algorithms hardware oriented as well as software oriented and discusses issues related to the accurate floating point implementation of these functions My purpose was not to give cooking recipes that allow to implement some given functions on some given floating point systems but to provide the reader with the knowledge that is necessary to build or adapt algorithms to his or her computing environment When writing this book I have had in mind two different audiences specialists who will have to design floating point systems hardware or software parts or to do research on algorithms and inquiring minds who just want to know what kind of methods are used to compute the math functions in current computers or pocket calculators Because of this the book is intended to be helpful as well for postgraduate and advanced undergraduate students in computer science or applied mathematics as for professionals engaged in the design of algorithms programs or circuits that implement floating point arithmetic or simply for engineers or scientists who want to improve their culture in that domain Algorithms for Computer Algebra Keith O. Geddes, Stephen R. Czapor, George Labahn, 2007-06-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields *Intelligent Computer Mathematics* Jacques Carette, David Aspinall, Christoph Lange, Petr Sojka, Wolfgang Windsteiger, 2013-07-01 This book constitutes the joint refereed proceedings of the 20th Symposium on the Integration of Symbolic Computation and Mechanized Reasoning Calculemus 2013 6th International Workshop on Digital Mathematics Libraries DML 2013 Systems

and Projects held in Bath UK as part of CICM 2013 the Conferences on Intelligent Computer Mathematics The 7 revised full papers out of 18 submissions for MKM 2013 5 revised full papers out of 12 submissions for Calculemus 2013 6 revised full papers out of 8 submissions for DML 2013 and 12 revised full papers out of 16 submissions for Systems and Project track presented together with 3 invited talks were carefully reviewed and selected resulting in 33 papers from a total of 73 submissions
