Syntax A Functional-typological Introduction Syntax:

Syntax Talmy Givón, 1984 The long awaited second volume of the two volume work on syntax from a functional typological perspective Grammar is viewed as a non arbitrary language processing device to be understood in terms of the various substantive parameters relevant to language Communicative function cognitive processing socio culture and neuro biology Distortions in this complex yet highly iconic code are due to conflicting functional requirements most commonly introduced into the code through the course of diachronic change Cross linguistic variation within each functional domain is highly constrained and yields a coherent typology of the most natural ways the same communicative function can be performed The volume covers the syntax of complex clauses and is organized according to the following plan Chapter 12 Noun phrases Chapter 13 Verbal complements Chapter 14 Voice and de transitivity Chapter 15 Relative clauses Chapter 16 Contrastive focus constructions Chapter 17 Marked topic constructions Chapter 18 Non declarative speech acts Chapter 19 The grammar of interclausal coherence Chapter 20 The grammar of referential coherence as mental processing instructions Chapter 21 Markedness and iconicity in syntax

Syntax Talmy Givón, 2001-01-01 This new edition of *Syntax A functional typological introduction* is at many points radically revised In the previous edition 1984 the author deliberately chose to de emphasize the more formal aspects of syntactic structure in favor of a more comprehensive treatment of the semantic and pragmatic correlates of syntactic structure With hindsight the author now finds the de emphasis of the formal properties a somewhat regrettable choice since it creates the false impression that one could somehow be a functionalist without being at the same time a structuralist To redress the balance explicit treatment is given to the core formal properties of syntactic constructions such as constituency and hierarchy phrase structure grammatical relations and relational control clause union finiteness and governed constructions At the same time the cognitive and communicative underpinning of grammatical universals are further elucidated and underscored and the interplay between grammar cognition and neurology is outlined Also the relevant typological database is expanded now exploring in greater precision the bounds of syntactic diversity Lastly *Syntax* treats synchronic typological diversity more explicitly as the dynamic by product of diachronic development or grammaticalization In so doing a parallel is drawn between linguistic diversity and diachrony on the one hand and biological diversity and evolution on the other It is then suggested that as in biology synchronic universals of grammar are exercised and instantiated primarily as constraints on development and are thus merely the apparent by products of universal constraints on grammaticalization

Syntax Talmy Givón, 1984 **Syntax : a functional-typological introduction. 2** Talmy Givón, 2001 *Syntax* T. Givón, 2001-07-19 This new edition of *Syntax A functional typological introduction* is at many points radically revised In the previous edition 1984 the author deliberately chose to de emphasize the more formal aspects of syntactic structure in favor of a more comprehensive treatment of the semantic and pragmatic correlates of syntactic structure With hindsight the author

now finds the de emphasis of the formal properties a somewhat regrettable choice since it creates the false impression that one could somehow be a functionalist without being at the same time a structuralist To redress the balance explicit treatment is given to the core formal properties of syntactic constructions such as constituency and hierarchy phrase structure grammatical relations and relational control clause union finiteness and governed constructions At the same time the cognitive and communicative underpinning of grammatical universals are further elucidated and underscored and the interplay between grammar cognition and neurology is outlined Also the relevant typological database is expanded now exploring in greater precision the bounds of syntactic diversity Lastly Syntax treats synchronic typological diversity more explicitly as the dynamic by product of diachronic development or grammaticalization In so doing a parallel is drawn between linguistic diversity and diachrony on the one hand and biological diversity and evolution on the other It is then suggested that as in biology synchronic universals of grammar are exercised and instantiated primarily as constraints on development and are thus merely the apparent by products of universal constraints on grammaticalization

Syntax : a functional-typological introduction Talmy Givón,1984 *Structure and Function: Approaches to the simplex clause* Christopher Butler,2003 Volume one of a two volume set outlining and comparing three approaches to the study of language labelled structural functionalist functional grammar FG role and reference grammar RRG and systemic functional grammar SFG

Syntactic Complexity Talmy Givón,Masayoshi Shibatani,2009 Complex hierarchic syntax is considered one of the hallmarks of human language The highest level of syntactic complexity recursive embedded clauses has been singled out by some for a special status as the apex of the uniquely human language faculty evolutionary but somehow immune to adaptive selection This volume coming out of a symposium held at Rice University in March 2008 tackles syntactic complexity from multiple developmental perspectives We take it for granted that grammar is an adaptive instrument of communication assembled upon the pre existing platform of pre linguistic cognition Most of the papers in the volume deal with the two grand developmental trends of human language diachrony the communal enterprise directly responsible for fashioning synchronic morpho syntax and ontogeny the individual endeavor directly responsible for the acquisition of competent grammatical performance The genesis of syntactic complexity along these two developmental trends is considered alongside with the cognition and neurology of grammar and of syntactic complexity and the evolutionary relevance of diachrony ontogeny and pidginization is argued on general bio evolutionary grounds Lastly several of the contributions to the volume suggest that recursive embedding is not in itself an adaptive target but rather the by product of two distinct adaptive gambits the recruitment of conjoined clauses as modal operators on other clauses and the subsequent condensation of paratactic into syntactic structures
