Threshold Analysis

David R. Holtgrave

Threshold Analysis:

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-12-10 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

Meta-Analysis, Decision Analysis, and Cost-Effectiveness Analysis Diana B. Petitti, 1999-10-14 Meta analysis decision analysis and cost effectiveness analysis are the cornerstones of evidence based medicine These related quantitative methods have become essential tools in the formulation of clinical and public policy based on the synthesis of evidence All three methods are taught with increasing frequency in medical schools and schools of public health and in health policy courses at the undergraduate and graduate level This book is a lucid introduction and will serve the needs of students taking introductory courses that cover these topics It will also be useful to clinicians and policymakers who need to understand the quantitative underpinnings of the methods in order to best apply the information that derives from them The second edition of this popular book adds new material on cumulative meta analysis as a method to explore heterogeneity The coverage of cost effectiveness analysis has been brought into close alignment with recommendations of the U S Public Health Panel on Cost Effectiveness Analysis in Health and Medicine Many of the examples have been replaced with more current examples and all of the material has been updated to reflect recent advances in the methods and the emergence of consensus about

some previously controversial issues analysis These three closely related methods have become even more important for synthesizing research since the first edition was published in 1994 And they have gained legitimacy as tools for guiding health policy

Handbook of Economic Evaluation of HIV Prevention Programs David R. Holtgrave,1998-10-31 If resources for HIV prevention efforts were truly unlimited then this book would be entirely unnecessary In a world with limitless support for HIV prevention activities one would simply implement all effective or potentially effective programs without regard to expense We would do everything useful to prevent the further spread of the virus that has already claimed hundreds of thousands of lives in the United States and millions of lives worldwide Unfortunately funding for HIV prevention programs is limited Even though the amount of available funding may seem quite large especially in the United States it is still fixed and not sufficient to meet all needs for such programs This was very well illustrated in the summer of 1997 when over 500 community based organizations applied for a combined total of 18 million of HIV prevention funding from the U S Centers for Disease Control and Prevention CDC Less than one fifth of these organizations received support via this funding mechanism Hence although 18 million may seem like a large amount of money at first blush it is not enough to meet all of the prevention needs that could be addressed by these community based organizations

Landslides: Analysis, Modeling and Mitigation Kripamoy Sarkar,Sarada Prasad Pradhan,Trilok Nath Singh,2025-03-18 The book aims to enhance understanding of landslides by focusing on detection prediction and monitoring Recently the number of significant landslides and the damage they cause has increased globally Landslides are among the most devastating natural hazards resulting in widespread damage to habitats on local regional and global scales Experts from around the world have shared their experiences in landslide research and practice which may help stakeholders mitigate and predict these events The book comprises chapters on Dynamics mechanisms and processes of landslides Mapping and assessment of hazard vulnerability and risk associated with landslides Geological geotechnical hydrological and geophysical modelling for landslides Numerical simulation of slope to analyse their stability Monitoring and early warning of landslides Application of remote sensing and GIS techniques in monitoring and assessment of landslides The book is very much helpful for researchers practitioners and decision makers to adapt suitable modern techniques for landslide study
