Solar power converts energy from the sun into electricity through the use of solar panels. A solar panel is a photovoltaic PV module that converts sunlight into direct current DC energy. This energy then flows into an inverter converting it into alternating current AC energy that can be used to power homes, businesses, and even entire cities. The three main types of solar power systems are On grid also known as a grid tie solar system, Off grid also known as a stand alone power system, and Hybrid Solar system with battery storage with grid connection. This guide will provide different examples to calculate the size of Solar Panel, Battery, and Inverter of Off Grid Solar Power System. The report consists of the following parts:

- Types of solar power system
