Foundation Flash Applications for Mobile Devices Richard Leggett, Weyert De Boer, Scott Janousek, 2007-05-01 With a growing number of mobile devices offering Flash support it is an increasingly viable platform for the development of mobile applications. *Foundation Flash Applications for Mobile Devices* is just the book you need to learn how to take advantage of this new audience of mobile application users. Inside it covers every facet of mobile Flash from the essentials of the Flash Lite 1.1 and 2.X platforms and writing applications to testing your work and deploying to mobile users. Applications presented include screensavers, wallpapers, data-consuming informational programs such as movie news and stock tickers, quiz games, action games, and more. You are given tips on mobile Flash development best practices, and all of the essential topics are covered, including creating and using sound, vector graphics, and bitmaps; optimizing assets for the small screen; coding realistic physics for games; and consuming web services using PHP, Java, ColdFusion, and .NET. Throughout the book, there are many samples to put together and learn from, and several bonus applications are also available to download and check out.

Marketing & Product Managers Scott Alan Stewart, 1986-05-01 This report provides a vivid picture of the pharmaceutical industry and its use of videodisc technology for education, training, and promotion in 1986. It is the result of conversations with marketing managers, product managers, and exhibit managers in 21 pharmaceutical companies who, between them, are responsible for the production of more than 80 videodiscs. Managers were asked to comment on the success of their videodisc programs, their plans for developing additional videodiscs, and their suppliers. Descriptions of nearly 50 videodisc projects are described. *Teaching, Learning, & Technology Roundtable Program* Steven W. Gilbert, Amanda L. Antico, 1996 Illinois

IN SIMULATION, 1965 An Introduction to Computer Simulation in Applied Science F. Abraham, 2012-12-06 This set of lectures is the outgrowth of a new course in the Department of Materials Science at Stanford University. It was taught collectively by the authors of the various sections and represents an attempt to increase the awareness of students in the materials area of computer simulation techniques and potentialities. The topics often ranged far afield from the materials area; however, the total package served the intended purpose of being an initiation into the world of computer simulation and, as such, made a useful first iteration to the intended purpose. The second iteration, which is in process, deals exclusively with the materials area. The course was designed to teach students a new way to wrestle with systems problems in the materials science work area that require the synthesis and interactions of several disciplines of knowledge. This course was a response to the realization that effective handling of real problems, which are essentially systems problems, is one of the most

important at tributes of a graduate materials scientist About a third of the course was devoted to the student s selected problem in the materials area which he simulated using the digital computer

Computer Simulation of Dynamic Phenomena Mark L. Wilkins,2013-03-09 This text describes computer programs for simulating phenomena in hydro dynamics gas dynamics and elastic plastic flow in one two and three dimen sions Included in the two dimensional program are Maxwell s equations and thermal and radiation diffusion The programs were developed by the author during the years 1952 1985 at the Lawrence Livermore National Laboratory The largest main frame computers available in the early 1950s were re quired to solve hydrodynamic problems in one space dimension by using forty mass points Subsequently numerical methods were developed for solv ing problems in two and three space dimensions but application of these methods had to wait until the main frame computers were large enough to tackle meaningful problems At the present time lap top computers can use these methods to solve problems in three space dimensions with the detail of 10 000 mass points The numerical procedures described in the text permit the exact con servation of physical properties in the solutions of the fundamental laws of mechanics 1 conservation of mass 2 conservation of momentum 3 con servation of energy The laws of mechanics are universal in their application Examples are given for the same computer simulation programs solving prob lems of penetration mechanics surface waves from earthquakes shock waves in solids and gases failure of materials

Simulation Training: Fundamentals and Applications Philippe Fauquet-Alekhine,Nane Pehuet,2015-07-24 Drawing on decades of industrial experience this insightful and practical guide uses case studies and an interdisciplinary perspective to explain the fundamentals of simulation training to improve performance of high risk professional activities It seeks to identify those conditions under which simulation training has been shown to improve professional practice while employing extensive real examples Simulation Training Fundamentals and Application helps readers to develop their own synthesis of the simulation learning method and to use such training to enhance their skills and performance Case studies demonstrate five specific theatres of professional practice the nuclear power industry aeronautics surgery anesthesia and metallurgy and then detailed analysis highlights the common factors and key results The author s background as a Human Factors Consultant Physicist and Physiologist has enriched studies of humans in work situations work organization and management and he has also been involved in pedagogical conception of experimental training on simulators based on his experience as a safety expert on nuclear power plant The book is useful to practitioners researchers and students both in industry and in university It is clearly cross disciplinary as it presents and discusses applications in engineering professional practice airline pilots and medicine

An Introduction to Computer Simulation Methods Harvey Gould,Jan Tobochnik,1988 *Computer Simulation Applications* Julian Reitman,1971 *Computer Simulations* Michael D. Pfeffer,Erik Bachmeier,2018 *Computer Simulations Advances in Research and Applications* begins with a concise overview and background of the topic during the past decade The finite element method and the commercial available codes are introduced with an emphasis on Abaqus as

the mostly used software in this field The next part deals with the tire geometry and creation of a consistent and computationally effective finite element mesh from 2D and 3D drawings The material models used for the description of the mechanical behavior of tire constituents are also examined The following paper is dedicated to the computer simulation modeling as a method of solution of differential games where analytical investigation is problematic The main idea is that a very small number of scenarios including both control variables and parameters can provide a sufficiently good qualitative representation of dynamics of the modeled system The Talbot Effect which was first experimentally observed by Henry Talbot in 1836 is discussed It is the repeated self imaging of a diffraction grating at regular distances in the near field behind the grating If the observed diffraction images are laid out as a function of distance a beautiful and repetitive pattern is observed this is known as the Talbot carpet The methodology of how the IFIM method was applied for the simulation of Talbot effect is described explicitly followed by a systematic synthesis of the Talbot carpet from the generated data After this Beckmanns scattering model is adopted to simulate the light scattering from the yarn surface and to analyze the relation between the scattering pattern and the surface twist angle The solution of the scattering intensity distribution for the yarn surface profile is derived and numerical results indicate that the highest light intensity on the backward light scattering pattern lies along the direction perpendicular to the surface fibers regardless of the fiber or yarn parameters The result of this chapter can serve as the theoretical basis for the measurement of yarn surface twist angle based on backward light scattering by the yarn The authors go on to present a numerical study of the unsteady airflow characteristics inside a solar chimney power plant Ansys Fluent 17.0 is used to simulate the air flow within the solar setup To validate our study a solar prototype is built in the National School of Engineers of Sfax University of Sfax Tunisia in the North Africa Subsequently the authors also present a distributed boundary value problem of thermal desorption with nonlinear dynamical boundary conditions The problem is reduced to the nonlinear functional differential equation of neutral type for surface concentration A numerical method is developed for TDS spectrum simulation where only integration of a nonlinear system of low order compared with e.g. the method of lines ordinary differential equations ODE is required Lastly the book presents an aggregation procedure for hydrogen permeability experiments precluding depressurization and or change of the samples of investigated material Additionally the corresponding mathematical software for correct processing of measurements along with appropriate assembly of the experimental unit is described

Computer Simulations with Mathematica Richard J. Gaylord, Paul R. Wellin, 1995 The study of natural phenomena using computer simulation is a major new research tool in the physical chemical biological and social sciences It is useful for studying simple systems and it is essential for the study of complex systems Using Mathematica an integrated software environment for scientific programming numerical analysis and visualization this book describes computer simulations applicable to a wide range of phenomena
