Working Models Of Human Perception:

Working Models of Human Perception Ben A. G. Elsendoorn, Herman Bouma, 1989 This book devotes attention to both theoretical and applied problems simultaneously Many applied problems turn out to be very difficult and they often need deep theoretical insight in order to get solved In fact applied problems often serve as a source of inspiration for theoretical work since they usually are beyond reach of present theories and may show us in what direction theories need to be developed The layout of the book is a reflection of the three main areas of research at the Institute for Perception Research Hearing and Speech Vision and Reading Cognition and Communication Following the set up of the workshop the organization of the papers is in pairs such that the odd numbered chapters are generally reactions to the even numbered chapters **The**

Perception of People Perry R. Hinton, 2015-09-16 What are other people like How do we decide if someone is friendly honest or clever What assumptions do we develop about them and what explanations do we give for their behaviour The Perception of People examines key topics in psychology to explore how we make sense of other people and ourselves Do our decisions result from careful consideration and a desire to produce an accurate perception Or do we jump to conclusions in our judgements and rely on expectations and stereotypes To answer these questions the book examines models of person perception and provides an up to date and detailed account of the central psychological research in this area focusing in particular on the social cognitive approach It also considers and reflects on the involvement of culture in cognition and includes coverage of relevant research in culture and language that influence the way we think and speak about others As well as providing a valuable text in social psychology The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology anthropology sociology philosophy and social history Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it Ideal reading for students of social psychology this engaging text will also be useful in subject areas such as communication studies and media studies where the perception of people is highly relevant **12th Annual Conference.**

Instructable Autonomous Agents Scott B. Huffman, 1994 Abstract In contrast to current intelligent systems which must be laboriously programmed for each task they are meant to perform instructable agents can be taught new tasks and associated knowledge This thesis presents a general

theory of learning from tutorial instruction and its use to produce an instructable agent Tutorial instruction is a particularly powerful form of instruction because it allows the instructor to communicate whatever kind of knowledge a student needs at whatever point it is needed To exploit this broad flexibility however a tutable agent must support a full range of interaction with its instructor to learn a full range of knowledge Thus unlike most machine learning tasks which target deep learning of a single kind of knowledge from a single kind of input tutorability requires a breadth of learning from a broad range of instructional interactions The theory of learning from tutorial instruction presented here has two parts First a computational model of an intelligent agent the problem space computational model indicates the types of knowledge that determine an agent s performance and thus that should be acquirable via instruction Second a learning technique called situated explanation specifies how the agent learns general knowledge from instruction The theory is embodied by an implemented agent Instructo Soar built within the Soar architecture Instructo Soar is able to learn hierarchies of completely new tasks to extend task knowledge to apply in new situations and in fact to acquire every type of knowledge it uses during task performance control knowledge knowledge of operator s effects state inferences etc from interactive natural language instructions This variety of learning occurs by applying the situated explanation technique to a variety of instructional interactions involving a variety of types of instructions commands statements conditionals etc By taking seriously the requirements of flexible tutorial instruction Instructo Soar demonstrates a breadth of interaction and learning capabilities that goes beyond previous instructable systems such as learning apprentice systems Instructo Soar s techniques could form the basis for future instructable technologies that come equipped with basic capabilities and can be taught by novice users to perform any number of desired tasks
