World Class Manufacturing Building Power Strength And Value:

World Class Manufacturing: The Next Decade Richard J. Schonberger, 2010-05-11 Since the invention of double entry bookkeeping managers have judged a company's worth by sales and profits. Now Richard J. Schonberger, the architect of the worldwide Just In Time revolution, reaches beyond financials to redefine excellence and reveals with new benchmark data how pioneers become dynasties. Schonberger's pathbreaking new research reveals that from 1950 to 1995, while financials dipped and soared repeatedly, industrial decline and ascendancy correlated perfectly with inventory turnover, one of two key nonfinancial indicators and a bedrock measure along with customer satisfaction of a company's power, strength, and value. In this immensely readable book, he captures these new metrics, the true predictions of future success in 16 customer-focused principles created from self-scored reports supplied by over 100 pioneering manufacturers in nine countries. Armed with new world-class benchmark data, Schonberger redefines excellence in terms of competence, capability, and customer-focused employee-driven data-based performance. For front-line associates to senior executives, Schonberger has written manufacturing's action agenda for the next decade. This book will be indispensable reading for manufacturing and general managers in all industries, as well as for pension fund managers, institutional investors, stock analysts, and stockbrokers.

World Class Manufacturing Richard Schonberger, 1996 Since the invention of double entry bookkeeping, managers have judged a company's worth by sales and profits. This book exposes the fallacies of this practice and redefines excellence in terms of competence, capability, and customer-focused employee drive. *The Routledge Companion to Cost Management* Falconer Mitchell, Hanne Nørreklit, Morten Jakobsen, 2013-08-22 Over the last two decades, cost management has been an area of dynamic change and development. This is evident in the extensive inventory of new high-profile techniques that have emerged. With cost management now firmly established as a distinct sub-discipline within management accounting, *The Routledge Companion to Cost Management* is a timely reference volume covering both practical developments and research in this area. Topics covered include cost control issues, cost analysis and decision making, cost management systems, environmental cost management. With chapters from an international team of contributors, this prestigious companion will prove an indispensable addition to any library with aspirations of keeping up to date with the world of accounting.

Group Technology and Cellular Manufacturing Nallan C. Suresh, John M. Kay, 2012-12-06 Group Technology and Cellular Manufacturing (GT/CM) have been widely researched areas in the past 15 years, and much progress has been made in all branches of GT/CM. Resulting from this research activity has been a proliferation of techniques for part machine grouping, engineering data bases, expert system-based design methods for identifying part families, new analytical and simulation tools for evaluating performance of cells, new types of cell incorporating robotics and flexible automation, team-based approaches for organizing the work force, and much more. However, the field lacks a careful compilation of this research.

and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and manufacturing lead times costs and at improving business quality and performance 3 Finally the book can be used as a textbook for graduate students in engineering and management for studying the field of Group Technology and Cellular Manufacturing

Let's Fix It! Richard J. Schonberger,2001-12-06
No company is built to last argues world renowned manufacturing guru Richard J Schonberger In this devastating indictment of current manufacturing practices Schonberger submits a four part revolutionary plan to solve the manufacturing crisis for good From his statistically reliable database of 500 top global manufacturers Schonberger finds that by the critical worldwide standard of lean production shedding inventories General Motors General Electric Toyota and other world leaders have stopped improving He presents powerful evidence that in recent years record profits have covered up waste and weakness Clearly a lack of will to renew and recover from the natural tendency toward regression and erosion it is more than a matter of garden variety complacency devastating as that is in this new era of global hypercompetition Schonberger asserts that the inclination of industry leaders to engage in stock hyping to gain a quick fix from the dot com explosion has distracted attention from the basics of world class excellence Among other villains contributing to the crisis Schonberger contends are newly hired managers with no trial by fire experience bad equipment systems and job design and retention of unprofitable customers and anachronistic command and control managerial hierarchies What to do Just as he introduced the legendary just in time framework to the West in the 1980s Schonberger prescribes strong medicine to cure our current malaise Find your blind spots he says Roll confusing time sapping initiatives into a master program that is immune from the flavor of the month Put lean into heavy handed control systems Develop products and standardize processes at home base for ease of migrating volume production anywhere in the world
