Where do they live?

Stingrays live along the sandy seafloor where they eat buried worms, clams, small crabs, and shrimp.

Their anatomy helps them survive on the bottom!

Why are there so many stingrays?

In the past, humans got rid of many natural predators, allowing their populations to grow.

How do I avoid getting stung?

To avoid stepping on a stingray, do the stingray shuffle! When entering the surf, especially on warm calm days, shuffle your feet back and forth so you nudge them and they will skitter off — it's like saying "excuse me".

What do I do if I get stung?

Find a lifeguard — they can help you! If you can't find a lifeguard, you can put the injured body part into hot water (not scalding), and the heat will breakdown the toxin and relieve the pain. Be sure to clean the wound and watch out for infection!

It's dangerous being small and flat like a pancake!

Hide!

Stingrays will bury themselves in the top layer of sand to hide from predators.

Defend!

Their tails are equipped with a sharp barb. If threatened, stingrays will flick their tail up to jab their attacker.
