interdisciplinary real world applications The intent of this book is to address that gap by equipping students with both the foundational scientific knowledge and the contextual understanding necessary to innovate adapt and lead in the modern world This book is not just another academic text listing formulas theories or definitions it is a curated exploration of how science breathes life into engineering inspiring creativity solving real problems and fostering sustainable progress It acknowledges that engineering today requires more than technical expertise it demands critical thinking ethical responsibility collaboration across disciplines adaptability in the face of emerging technologies and a genuine commitment to societal well being With this perspective the book delves deeply into the multifaceted relationship between applied science and engineering practice showcasing how core scientific disciplines such as mathematics physics chemistry and material science serve as the bedrock for engineering innovation across fields as diverse as civil infrastructure biomedical technology robotics aerospace and environmental solutions
