**Thin-walled Cellular Structures** V. A. Ignat'ev (akademik MAN VSh.),1999 *Elastic and Thermoelastic Problems in Nonlinear Dynamics of Structural Members* Jan Awrejcewicz,Vadim A. Krysko,2020-04-06 From the reviews A unique feature of this book is the nice blend of engineering vividness and mathematical rigour The authors are to be congratulated for their valuable contribution to the literature in the area of theoretical thermoelasticity and vibration of plates Journal of Sound and Vibration

**Nonclassical Thermoelastic Problems in Nonlinear Dynamics of Shells** Jan Awrejcewicz,Vadim A. Krysko,2012-12-06 This monograph describes some approaches to the nonlinear theory of plates and shells By nonclassical approaches we mean the description of problems with mathematical models of different sizes two and three dimensional differential equations and different types differential equations of hyperbolic and parabolic type in the spatial coordinates The nonlinearities investigated are also of various categories geometrical physical elasto plastic and periodic Creating such types of mathematical models and their detailed justification allows us to achieve the most accurate description of the real behaviour of shell type structures These models allow us to include interaction between the strain and temperature fields and coupling between the displacement field and the external influence of a transonic gas flow The mathematical treatment of such models helps us greatly in obtaining reliable results by numerical computation It appears that the most dangerous situation for thin shallow shells is the conjunction of a static load with dynamic interactions Such combined loads very often cause buckling of shell structures and in many cases a series of bucklings which can cause fracture The failure of a structure usually needs a small amount of time Therefore the lifetime of a shell structure depends strongly on nonelastic deflections and it is important to mathematically model shell structures as precisely as possible This monograph is one of several devoted to this subject Now we shall briefly describe the contents of the book Note that not all of the results presented here have been published in textbook format

**Artificial Intelligence Assisted Structural Optimization** Adithya Challapalli,Guoqiang Li,2025-02-27 Artificial Intelligence Assisted Structural Optimization explores the use of machine learning and correlation analysis within the forward design and inverse design frameworks to design and optimize lightweight load bearing structures as well as mechanical metamaterials Discussing both machine learning and design analysis in detail this book enables readers to optimize their designs using a data driven approach This book discusses the basics of the materials utilized for example shape memory polymers and the manufacturing approach employed such as 3D or 4D printing Additionally the book discusses the use of forward design and inverse design frameworks to discover novel lattice unit cells and thin walled cellular unit cells with enhanced mechanical and functional properties such as increased mechanical strength heightened natural frequency strengthened impact tolerance and improved recovery stress Inverse design methodologies using generative adversarial networks are proposed to further investigate and improve these structures Detailed discussions on fingerprinting approaches machine learning models structure screening techniques and

typical Python codes are provided in the book The book provides detailed guidance for both students and industry engineers to optimize their structural designs using machine learning
