Diagnostics of Mechatronic Systems Pavol Božek, Yury Nikitin, Tibor Krenický, 2021-03-03 This book provides novel approach to the diagnosis of complex technical systems that are widely used in various kinds of transportation energy metallurgy metalworking fuels mining chemical paper industries etc Effective diagnostic systems are necessary for the early detection of errors in mechatronic systems for the organization of maintenance and for the assessment of the performed service quality Unfortunately the practical use of AI in the diagnosis of mechatronic systems is still quite limited and the inability to build effective mechatronic systems leads to significant economic losses and dangers The main aim of this book is to contribute to knowledge within the topic of diagnostics of mechatronic systems by the analysis of the elements reliability characteristics using methods models and algorithms for diagnostics and by studying examples of model diagnostic systems using AI methods based on neural networks fuzzy inference systems and genetic algorithms

Fault Diagnosis Józef Korbicz, Jan M. Koscielny, Zdzisław Kowalczyk, Wojciech Cholewa, 2012-12-06 All real systems in nature physical biological and engineering ones can malfunction and fail due to faults in their components Logically the chances for malfunctions increase with the systems complexity The complexity of engineering systems is permanently growing due to their growing size and the degree of automation and accordingly increasing is the danger of failing and aggravating their impact for man and the environment Therefore in the design and operation of engineering systems increased attention has to be paid to reliability safety and fault tolerance But it is obvious that compared to the high standard of perfection that nature has achieved with its self healing and self repairing capabilities in complex biological organisms fault management in engineering systems is far behind the standards of their technological achievements it is still in its infancy and tremendous work is left to be done In technical

control systems defects may happen in sensors actuators components of the controlled object the plant or in the hardware or soft ware of the control framework Such defects in the components may develop into a failure of the whole system This effect can easily be amplified by the closed loop but the closed loop may also hide an incipient fault from being observed until a situation has occurred in which the failing of the whole system has become unavoidable
