Coded Modulation Systems John B. Anderson, Arne Svensson, 2006-04-11 Coded Modulation Systems is an introduction to the subject of coded modulation in digital communication It is designed for classroom use and for anyone wanting to learn the ideas behind this modern kind of coding Coded modulation is signal encoding that takes into account the nature of the channel over which it is used Traditional error correcting codes work with bits and add redundant bits in order to correct transmission errors In coded modulation continuous time signals and their phases and amplitudes play the major role The coding can be seen as a patterning of these quantities The object is still to correct errors but more fundamentally it is to conserve signal energy and bandwidth at a given error performance The book divides coded modulation into three major parts Trellis coded modulation TCM schemes encode the points of QAM constellations lattice coding and set partition techniques play major roles here Continuous phase modulation CPM codes encode the signal phase and create constant envelope RF signals The partial response signaling PRS field includes intersymbol interference problems signals generated by real convolution and signals created by lowpass filtering In addition to these topics the book covers coding techniques of several kinds for fading channels spread spectrum and repeat request systems The history of the subject is fully traced back to the formative work of Shannon in 1949 Full explanation of the basics and complete homework problems make the book ideal for self study or classroom use
