Sengupta, Nirmal, *User-Friendly Irrigation Designs*, Sage Publications, New Delhi, 1993, pp.147, Rs. 185.

For a diverse and old country like ours, it is but natural to find wide spectrum of irrigation methods and designs evolved over time to suit different rainfall pattern, topography, and geo-hydrology across space. Irrigation designs range from a simple diversion from a natural stream by a single farmer in the mountain or raising bunds to intercept natural flows for irrigation in the foothills by a group of farmers to a multi-purpose storage-cum-distribution work involving many farming communities and spread across larger areas in the plains. However, both public policy and economic literature in India on irrigation tend to concentrate mostly on the polar cases of the privately-owned groundwater-based energised wells/tubewells and the publicly-owned gravity-based large scale surface irrigation projects side-tracking, thereby, the significance of a rich variety of the in-between cases of farmer-managed indigenous designs providing irrigation cover in the mountainous terrain and other water-short marginal areas.

Nirmal Sengupta attempts to fill this gap through his book the primary objective of which is to document, describe, and evaluate such hitherto least studied designs collectively termed by him as 'user-friendly irrigation designs' (UFIDs). What are these UFIDs? One easy way to delimit them is to say that they include all forms of surface irrigation designs other than the government canals such as tanks, private canals, and a wide variety of indigenous designs
