Using Cooperative Learning In The Mathematics Classroom:

Engaging Mathematics Students Using Cooperative Learning John D. Strebe, 2014-01-09 In this book author and veteran teacher John D Strebe offers a wide selection of student engagement strategies for math teachers in grades K 12 Strebe shares his class tested ideas in a clear and spirited voice with his devotion to the teaching profession and his students apparent on every page Motivate your math students using the strategies in this book gleaned from Strebe s 38 years of teaching experience Engaging Mathematics Students Using Cooperative Learning shows teachers how to create a climate in which students learn and work respectfully in teams and in which they strive to improve their math skills together Additionally many of the engagement strategies can be applied in classrooms of other subjects With invaluable ideas to help students remain engaged for longer time periods this book is especially helpful for teachers instructing in a block schedule

The Effectiveness of Cooperative Learning in the Mathematics Classroom Areej Barham, 2012 The study investigates the rationale and value of using cooperative learning strategies in the mathematics classroom with special reference to its effectiveness in promoting problem solving skills and levels of achievement in mathematics In this it is compared with traditional teaching methods The study sample was composed of 348 eighth grade students in eight classes from two separate female and male schools and included female and male teachers Two female and two male teachers were trained in the use of cooperative learning strategies in their classes during the implementation of the experiment while the other four teachers had been asked to keep using their usual traditional teaching methods The experiment took place within two scholastic semesters and the same mathematical content was covered by the two groups within the experiment Pre and post mathematical achievement tests were employed to assess students progress in achievement and problem solving skills Also a programme evaluation questionnaire was applied at the end of the experiment for all students involved In addition to the quantitative methodology the study also addressed qualitative issues All the teachers involved in the experiment and a sample of students were interviewed Lesson observations were conducted within the research programme to evaluate the implementation of the cooperative learning strategies and teachers and students responses towards it In addition teachers were asked to record weekly diaries to assess their judgement on student progress within the experiment The researcher recognises that teachers and students who apply cooperative learning strategies might be strongly motivated and be more enthusiastic by the very fact of trying a new strategy Consideration was therefore given to this point at all stages The study tries to determine if such strategies are really valuable in the mathematics classroom allowing for all the variables and have measurable effects in promoting problem solving skills and achievement in mathematics The study demonstrates that cooperative learning strategies enhance the teaching and learning process by transferring focus from a teacher centred situation into a student centred learning context This enriches the cognitive competitive and social interaction and hence develops outcomes in the cognitive affective motivational and social domains The study proved the positive impact of

applying such strategies in enhancing mathematical achievement and promoting problem solving skills compared with the impact made by traditional teaching strategies Cooperative learning strategies could offer all students with different abilities the opportunities to cooperate interact and participate in the mathematics lesson This gave them a chance to do mathematics by themselves speak their thoughts offer and receive explanations introduce several procedures for solving problems and hence profit from the mathematical knowledge available in the group as a whole The new learning approach encouraged students to challenge problems and provided them with the opportunities to speak mathematically to understand the mathematical concepts and rules and to use them Results from the study also demonstrated that cooperative learning developed other skills It improved student interaction communication and social skills and built more positive attitudes towards learning compared with the traditional methods Developing student behaviour and personality was therefore an important additional feature The study illustrated that cooperative learning strategies help to solve problems faced by teachers in classroom management As expected the research showed that outcomes differed from case to case and from one situation to another The academic ability of students and the quality of mathematical material played an obvious role emphasising positive or negative affects On the other hand gender differences examined in the study showed that despite female students achieving better results male students actually displayed more positive attitudes toward mathematics But again female students were more enthusiastic in applying cooperative learning The study is the first of this nature to be applied in Jordan and has several implications for theory and practice No teaching method is the best but it is recommended to provide teachers with professional training programmes to apply more developmental teaching methods effectively and to modify mathematical textbooks and teachers guides for the use of different teaching methods It is recommended that more research be carried out in different fields of study to concentrate on improving the quality of learning and enhancing problem solving skills

 Coggins,2007-02-12 The number of students whose first language is not English is increasing As a result many teachers need
 new resources to adapt their teaching of mathematics to support the mathematical learning of students with limited English
 and to include them in rigorous instruction By incorporating multimodal strategies teachers can more confidently teach
 standards based mathematics that can reach all of their students Through simple straightforward language and examples
 this resource helps teachers develop specialised understanding and strategy knowledge for supporting a high level of

 Cooperative learning is one method recognized to address this Numerous researchers have shown that cooperative learning
 leads to improved skills in teamwork and communication in other fields Johnson and Johnson 2007 Slavin 1995 Cooperative
 learning used in this study showed that the secondary math students benefited socially and academically through effective
 student communication This case study reported observational evidence concerning the patterns and experiences of student
 interaction in discussions within cooperative learning groups in several high school geometry classes Developed from data
 collected in observations audiotapes and student journals notebooks a multiple case study was used to examine the
 discussions of two groups of students in cooperative learning groups Each group participated in three activities Placemat to
 build team camaraderie Numbered Heads to strengthen positive interdependence and STAD to ensure individual
 accountability Four patterns emerged when examining the data change in attitude toward cooperative learning the
 development of trust group regulation and the facilitation of math learning Students showed a more positive feeling toward
 cooperative learning stated an increased appreciation for cooperative learning developed trust in their group members and
 were able to analyze what they were doing well and what areas needed work Math learning occurred when the students
 demonstrated how they solved problems by communicating using mathematical concepts and language Cooperative

Cooperative Learning and the Collaborative School Ronald S. Brandt, 1991 Cooperation in the classroom counteracts well established routines and values that nearly all adults and many educators take for granted Education remains a fiercely competitive enterprise and individualistic notions of professionalism predominate Despite the continued importance of independence initiative and personal achievement today s schools are experimenting with consideration sharing collegiality and commitment to group goals This volume contains readings from recent editions of Educational Leadership on cooperative learning and collaborative schools beginning with Robert Slavin s introduction and Ronald Brandt s insistence that cooperation is not un-American The articles in the second section discuss various cooperative learning models including Team Assisted Individuation Cooperative integrated Reading and Composition and Group Investigation The third section is devoted to implementation of cooperative learning and the fourth section highlights the idea of schools as caring communities developed through group work The sixth section provides ideas on how to get started and the seventh section summarizes controversies among various researchers The final section presents articles on the collaborative school focusing on developing teacher collegiality cooperative professional development and school improvement efforts The volume ends with an extensive annotated bibliography divided into nine parts MLH
