Statistical Experiments Using BASIC S. M. Dowdy, 1986 **Statistical Experiments and Decisions** Albert Nikolaevich Shiryaev, V. G. Spokoiny, 2000 This volume provides an exposition of some fundamental aspects of the asymptotic theory of statistical experiments The most important of them is how to construct asymptotically optimal decisions if we know the structure of optimal decisions for the limit experiment *Comparison of Statistical Experiments* Erik Torgersen, 1991-03-14 There are a number of important questions associated with statistical experiments when does one given experiment yield more information than another how can we measure the difference in information how fast does information accumulate by repeating the experiment The means of answering such questions has emerged from the work of Wald Blackwell LeCam and others and is based on the ideas of risk and deficiency The present work which is devoted to the various methods of comparing statistical experiments is essentially self contained requiring only some background in measure theory and functional analysis Chapters introducing statistical experiments and the necessary convex analysis begin the book and are followed by others on game theory decision theory and vector lattices The notion of deficiency which measures the difference in information between two experiments is then introduced The relation between it and other concepts such as sufficiency randomisation distance ordering equivalence completeness and convergence are explored This is a comprehensive treatment of the subject and will be an essential reference for mathematical statisticians
