Statistics For Archaeologists A Commonsense Approach:

Statistics for Archaeologists Robert D. Drennan, 2013-06-29 This book is intended as an introduction to basic statistical principles and techniques for the archaeologist It grows primarily from my experience in teaching courses in quantitative analysis for undergraduate and graduate students in archaeology over a number of years The book is set specifically in the context of archaeology not because the issues dealt with are uniquely archaeological in nature but because many people find it much easier to understand quantitative analysis in a familiar context one in which they can readily understand the nature of the data and the utility of the techniques The principles and techniques however are all of much broader applicability Physical anthropologists cultural anthropologists sociologists psychologists political scientists and specialists in other fields make use of these same principles and techniques The particular mix of topics the relative emphasis given them and the exact approach taken here however do reflect my own view of what is most useful in the analysis of specifically archaeological data It is impossible to fail to notice that many aspects of archaeological information are numerical and that archaeological analysis has an unavoidably quantitative component Standard statistical approaches are commonly applied in straightforward as well as unusual and ingenious ways to archaeological problems and new approaches have been invented to cope with the special quirks of archaeological analysis The literature on quantitative analysis in archaeology has grown to prodigious size in the past 25 or 30 years

Statistics for Archaeologists Robert D. Drennan, 2009-08-21 In the decade since its publication the first edition of *Statistics for Archaeologists* has become a staple in the classroom Taking a jargon free approach this teaching tool introduces the basic principles of statistics to archaeologists The author covers the necessary techniques for analyzing data collected in the field and laboratory as well as for evaluating the significance of the relationships between variables In addition chapters discuss the special concerns of working with samples This well illustrated guide features several practice problems making it an ideal text for students in archaeology and anthropology Using feedback from students and teachers who have been using the first edition as well as another ten years of personal experience with the text the author has provided an updated and revised second edition with a number of important changes New topics covered include Proportions and Densities Error Ranges for Medians Resampling Approaches Residuals from Regression Point Sampling Multivariate Analysis Similarity Measures Multidimensional Scaling Principal Components Analysis Cluster Analysis Those already familiar with the clear and useful format of *Statistics for Archaeologists* will find this new edition a welcome update and the new sections will make this seminal textbook an indispensable resource for a whole new group of students professors and practitioners

[The Archaeologist's Laboratory](#) E.B. Banning, 2000-09-30 Intended as a text for students in upper division undergraduate and graduate level courses as well as a manual for professional researchers and cultural resource management practitioners the book is abundantly illustrated and referenced and includes a glossary of key terms Suggested laboratory exercises to accompany the text are available on a web site **BOOK JACKET**

The Archaeologist's Laboratory Edward B. Banning, 2020-07-27 This second edition of the classic textbook *The Archaeologist's Laboratory* is a substantially revised work that offers updated information on the archaeological work that follows fieldwork such as the processing and analysis of artifacts and other evidence. An overarching theme of this edition is the quality and validity of archaeological arguments and the data we use to support them. The book introduces many of the laboratory activities that archaeologists carry out and the ways we can present research results including graphs and artifact illustrations. Part I introduces general topics concerning measurement error, data quality, research design, typology, probability, and databases. It also includes data presentation, basic artifact conservation, and laboratory safety. Part II offers brief surveys of the analysis of lithics and ground stone, pottery, metal artifacts, bone and shell artifacts, animal and plant remains, and sediments, as well as dating by stratigraphy, seriation, and chronometric methods. It concludes with a chapter on archaeological illustration and publication. A new feature of the book is illustration of concepts through case studies from around the world and from the Palaeolithic to historical archaeology. The text is appropriate for senior undergraduate students and will also serve as a useful reference for graduate students and professional archaeologists. **Archaeological Research**

Peter Peregrine, 2021-12-30 The third edition of *Archaeological Research* introduces the basic methods of archaeological research including data collection, analysis, and interpretation, as well as considering the state of the field today. With new sections on curating archaeological collections and public archaeology, the third edition also adds a new chapter on the analysis of metals and glass. This popular, concise textbook examines approaches to the archaeological record, sampling, and research design, survey and excavation methods and strategies, recordkeeping, dating, and analysis of archaeological materials, and the professional practice of archaeology. *Archaeological Research* continues to be an excellent text for undergraduate students in basic archaeology courses, field methods courses, and field schools. **Modelling Identities**

Catalin Nicolae Popa, 2018-05-26 This volume investigates the construction of group identity in Late La Tène South East Europe using an innovative statistical modelling method. Death and burial theory underlies the potential of mortuary practices for identity research. The sample used for this volume's research consists of 370 graves organized in a specially created database that records funerary ritual and grave goods information. In the case of grave goods, this involved found hierarchically organized categorical variables which serve to describe each item by combining functional and typological features. The volume also aims to show the compatibility of archaeological theory and statistical modelling. The discussions from archaeological theory rarely find methodological implementations through statistical methods. In this volume, theoretical issues form an integrative part of data preparation, method development, and result interpretation. **American Journal of Archaeology**, 1997

Handbook of Archaeological Sciences D. R. Brothwell, A. M. Pollard, 2001-08-17 D. R. Brothwell and A. M. Pollard have got together to create the first large-scale review of the many sciences which contribute to modern archaeology for over 30 years. *The Handbook of Archaeological Sciences* is intended to bring together a substantial overview

of the sciences in archaeology in one complete volume The book is organised under eight broad headings dating quaternary palaeoenvironments human palaeobiology developments in biomolecular archaeology resource exploitation archaeological prospection conservation science in the archaeological context and statistical and computer applications The contributors who are all well known in their own areas of expertise bring together in each chapter the basic science and the relevance of this science to the overall goal of archaeology understanding humans in the past This book is an invaluable source of reference for those interested in archaeology anthropology quaternary studies geography palaeoecology computing biology chemistry and physics those involved in commercial and local authority field archaeology units museums and archaeological organisations
