Models of Time and Space from Astrophysics and World Cultures Bryan E. Penprase, 2023-07-24 *Models of Time and Space from Astrophysics and World Cultures* explores how our conceptions of time space and the physical universe have evolved across cultures throughout the centuries Developed with a humanistic approach this book blends historical sources biographical profiles of exceptional scientists and the latest discoveries in both astrophysics and particle physics This rich read describes the incredible insights and ultimate limits of our knowledge the physical universe and how ideas old and new have converged across the world to build our current understanding of reality From the Large Hadron Collider to the James Webb Space Telescope we have mapped the universe from the smallest to largest scales allowing us to gain fundamental knowledge that has transformed our understanding of the universe The chapters herein will teach you about dark matter and dark energy gravitational waves and other complex parts of the cosmos Along the way you will learn a thing or two about quantum mechanics parallel universes and the ultimate boundaries of the observable universe

This book cultivates insight from a variety of cultural traditions including perspectives from both modern and ancient cultures in order to show how our modern conceptions of space and time have arisen from the ongoing explorations within ancient world civilizations. It is a valuable, intriguing, and insightful volume for those interested in the fields of historical astronomy and cultural astronomy, as well as for anyone interested in learning about the latest finds from the field of physics and astrophysics.

Solar and Space Physics National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on a Decadal Strategy for Solar and Space Physics (Heliophysics), 2014-09-25. In 2010, NASA and the National Science Foundation asked the National Research Council to assemble a committee of experts to develop an integrated national strategy that would guide agency investments in solar and space physics for the years 2013-2022. That strategy, the result of nearly 2 years of effort by the survey committee, which worked with more than 100 scientists and engineers on eight supporting study panels, is presented in the 2013 publication *Solar and Space Physics: A Science for a Technological Society*. This booklet, designed to be accessible to a broader audience of policymakers and the interested public, summarizes the content of that report.

U.S. Astronomy and Astrophysics National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Space Studies Board, Committee on the Organization and Management of Research in Astronomy and Astrophysics, 2001-11-20. In its fiscal year 2002 budget summary document, the Bush administration expressed concern based in part on the findings and conclusions of two National Research Council studies about recent trends in the federal funding of astronomy and astrophysics research. The President's budget blueprint suggested that now is the time to address these concerns and directed the National Science Foundation (NSF) and the National Aeronautics and Space Administration (NASA) to establish a blue ribbon panel to:

1. assess the organizational effectiveness of the federal research enterprise in astronomy and astrophysics;
2. consider the pros and cons of transferring NSF's astronomy responsibilities to NASA; and
3. suggest alternative options for addressing issues in the management and organization of astronomical and astrophysical research.

NASA and NSF asked the National Research Council to carry out the rapid assessment requested by the President. This report, focusing on the roles of NSF and NASA, provides the results of that assessment.
