Space Remote Sensing Systems H. S. Chen, 2014-05-10 Space Remote Sensing Systems An Introduction discusses the space remote sensing system which is a modern high technology field developed from earth sciences engineering and space systems technology for environmental protection resource monitoring climate prediction weather forecasting ocean measurement and many other applications This book consists of 10 chapters Chapter 1 describes the science of the atmosphere and the earth's surface Chapter 2 discusses spaceborne radiation collector systems while Chapter 3 focuses on space detector and CCD systems The passive space optical radiometer and spectrometer systems are presented in Chapters 4 and 5 Chapter 6 elaborates the passive space microwave radiometer systems Chapters 7 and 8 deliberate the active space lidar systems active space synthetic aperture radar and scatterometer systems The low earth orbit large satellite systems and applications are covered in Chapter 9 The last chapter considers the geosynchronous orbit large satellite systems This publication is written for scientists engineers and seniors or graduate students who are interested in the field of space remote sensing systems

The Future of Remote Sensing from Space DIANE Publishing Company, 1995-06 Examines issues related to the development and operation of publicly funded U S and foreign civilian remote sensing systems Explores the military and intelligence use of data gathered by civilian satellites Examines the outlook for privately funded and operated remote sensing systems Numerous charts graphs tables and photos [The Future of remote sensing from space civilian satellite systems and applications.](#) , 1993 *The Future of Remote Sensing from Space* , 1993

Johnson, Rand Corporation, 1993 U S space based remote sensing programs and activities are facing a number of critical junctures in the coming decade The U S government will have some critical decisions about its own requirements for exploiting remote sensing capabilities for environmental meteorological and national security uses balanced against limited and decreasing budgets for those activities Furthermore there are ongoing debates within the Administration in the Congress and by the American public over the extent of the role government should play in fostering the commercial remote sensing sector The explosion in geographical information system technologies for enhancing raw remote sensing data is also encouraging the development of a commercial market These trends and others such as expanding international capabilities have combined to produce a dynamic remote sensing arena an arena requiring a balanced approach to resource allocation and long range planning This Note presents a survey of remote sensing policy issues for the 1990s with the purpose of assisting in the development of a future space related RAND research agenda *Civil Land Remote Sensing Systems* United States. Council (U.S.). Space Applications Board,1985 Toward New Partnerships In Remote Sensing National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Steering Committee on Space Applications and Commercialization,2002-09-18 The technical scientific policy and institutional environment for conducting Earth science research has been changing rapidly over the past few decades Changes in the technical environment are due both to the advent of new types and sources of remote sensing data which have higher spatial and spectral resolution and to the development of vastly expanded capabilities in data access visualization spatial data integration and data management The scientific environment is changing because of the strong emphasis on global change research both nationally and internationally and the evolving data requirements for that research And the policy and institutional environment for the production of Earth observation data is changing with the diversification of both remote sensing data and the institutions that produce the data In this report the Space Studies Board s Steering Committee on Space Applications and Commercialization explores the implications of this changing environment examining the opportunities and challenges it presents **U.S. Commercial Remote Sensing Satellite Industry** Kevin M. O'Connell,2001 American firms have begun to operate their own imaging satellite systems aiming to become an important part of the U S commercial remote sensing industry To succeed over the long run these new U S commercial remote sensing satellite firms need a combination of reliable technologies government policies that encourage U S industry competitiveness a strong international presence and sound business plans to ensure their competitiveness in both the domestic and international marketplaces The greatest risks for the these firms come from the challenge of transforming themselves from imagery data providers to strong competitors as information age companies the need to master the technical risks of building and operating sophisticated imaging satellite systems and the requirement to operate effectively in a complex international business environment In addition the government_s policymaking process has yet to achieve the degree of predictability timeliness and transparency that the firms need if they are expected to operate effectively in a highly competitive and rapidly changing global marketplace The authors conclude with six recommendations that the U S Department of Commerce should adopt to best fulfill its responsibilities for promoting the U S commercial remote sensing industry and for encouraging the competitiveness of new private imaging satellite firms *Space Optical Remote Sensing* Jiasheng Tao,2023-07-29 This book highlights the fundamentals technologies and methods of space optical remote sensing and system design The author introduces concepts and methods established during his decades of research and practice covering topics such as difference between the spatial resolution of pixel and the resolution of traditional film the resolution of remote sensing image for characteristics and target recognition purpose and image shift problem of sampling image space The book comprehensively and systematically introduces the basic concepts theories parameter design calculations of imaging cameras multispectral cameras surveying cameras infrared cameras and imaging spectrometers their respective system components and performance evaluation of space optical remote

sensing systems The book also discusses the overall design of space optical remote sensing systems including light sources the ground air system target characteristics spectrum selection energy calculation orbital parameters optical remote sensor parameters spacecraft parameters coordination and selection comprehensive analysis and large scale system performance evaluation methods forming a complete idea on how to achieve the goals of the system design The book enables readers to understand the working principles of the whole systems from a theoretical depth and grasp the full skillset on how to implement advantages and balance technical difficulties for orbit subsystems of the platform and payloads The book is a must read for those who seek to build strong ability for research development and innovation surrounding the subject matter
