Space Physiology (kosmicheskaya Fiziologiya). O. G. Gazenko, V. V. Parin, V. N. Chernigovskii, V. I. Yazdovskii, SCHOOL OF AEROSPACE MEDICINE BROOKS AFB TEX., 1968 The goal of space physiology is to study the character and peculiarities of space flight stresses brought to bear on the organism of animals and man The emphasis is on basic investigation to seek out rational ways of increasing man s tolerance to space flight and to determine the basic physiologic demands of a given organism on a spacecraft s environment and equipment complex It is in this light that conditions amenable to optimal crew performance must be sought The influence on the body of three basic groups of factors is discussed 1 Those associated with the dynamics of space flight acceleration weightlessness vibration etc 2 Those associated with long missions in the artificial environment of a space capsule microclimate isolation hypodynamia etc and 3 Those which characterize outer space as a unique environment of habitation radiation temperature or thermal conditions etc Author Scientific and Technical Aerospace Reports , 1987 **Space Physiology, Some Results and Prospects of Experimental Investigations** Oleg Georgievich Gazenko, 1965 **Space Physiology and Medicine** Gordon Press Publishers, 1994-11 **Space Physiology and Medicine: Reports and Unique Data Obtained on Small Sample Sizes** Marc-Antoine Custaud, Kunihiko Tanaka, Pooneh Bagher, Jack J. W. A. van Loon, Elena S. Tomilovskaya, Brandon Richard Macias, Olga Vinogradova, Martina Heer, Alan R. Hargens, Alexander Chouker, Alain Maillet, 2025-12-19 Research in space physiology and medicine can be considered remarkable The space environment is unique and complex and human adaptation to this environment requires a perfect understanding of its effects on human physiology Environmental conditions in space such as microgravity radiation and confinement have significant effects on the human body Studying these effects not only provides valuable information on how the human body reacts to extreme conditions but also contributes to the development of essential prophylactic strategies called countermeasures for preparing future long duration manned space flights Space

physiology studies require complex equipment and technologies often specific to flight missions making them costly and difficult to implement Additionally these studies are limited by the number of astronauts subject availability and mission duration The history of human space exploration has been accompanied by the acquisition of unique data often on small samples Ground based simulation experiments in humans using bed rest confinement dry immersion parabolic flights as well as animal and cellular models allow for studies with larger experimental groups *Space and Geometry in the Light of Physiological, Psychological and Physical Inquiry* Ernst Mach,1906 *American Journal of Physiology* ,1921 Vols for 1898 1941 1948 56 include the Society s proceedings primarily abstracts of papers presented at the 10th 53rd annual meetings and the 1948 56 fall meetings *The Journal of Physiology* ,1917 **General Physiology; Or, Physiological Theory of Cosmos** Camilo Calleja,1890 *An Introduction to Human Experimental Physiology* Francis William Lamb,1930 **Journal of Anatomy and Physiology** ,1871 *The Journal of Anatomy and Physiology* ,1873
