Spatial Electric Load Forecasting:

Spatial Electric Load Forecasting H. Lee Willis, 2002-08-09 Containing 12 new chapters this second edition offers increased coverage of weather correction and normalization of forecasts anticipation of redevelopment determining the validity of announced developments and minimizing risk from over or under planning It provides specific examples and detailed explanations of key points to consider for both standard and unusual utility forecasting situations information on new algorithms and concepts in forecasting a review of forecasting pitfalls and mistakes case studies depicting challenging forecast environments and load models illustrating various types of demand Electrical Load Forecasting S.A. Soliman, Ahmad Mohammad Al-Kandari, 2010-05-26 Succinct and understandable this book is a step by step guide to the mathematics and construction of electrical load forecasting models Written by one of the world's foremost experts on the subject Electrical Load Forecasting provides a brief discussion of algorithms their advantages and disadvantages and when they are best utilized The book begins with a good description of the basic theory and models needed to truly understand how the models are prepared so that they are not just blindly plugging and chugging numbers This is followed by a clear and rigorous exposition of the statistical techniques and algorithms such as regression neural networks fuzzy logic and expert systems The book is also supported by an online computer program that allows readers to construct validate and run short and long term models Step by step guide to model construction Construct verify and run short and long term models Accurately evaluate load shape and pricing Create regional specific electrical load models Introducing System-based Spatial Electricity Load Forecasting Mehdi Kardehi Moghaddam, 2016 **Aging Power Delivery Infrastructures** Randall R. Schrieber, H. Lee Willis, Edmund Philips, 2000-12-14 Illustrates state of the art planning design operational and managerial methods Demonstrates novel approaches to utilizing resources in an aging electric power delivery infrastructure maximizing system effectiveness and maintaining competitive financial performance while reinforcing good customer service *Electric Power System Planning* Hossein Seifi, Mohammad Sadegh Sepasian, 2011-06-24 The present book addresses various power system planning issues for professionals as well as senior level and postgraduate students Its emphasis is on long term issues although much of the ideas may be used for short and mid term cases with some modifications Back up materials are provided in twelve appendices of the book The readers can use the numerous examples presented within the chapters and problems at the end of the chapters to make sure that the materials are adequately followed up Based on what Matlab provides as a powerful package for students and professional some of the examples and the problems are solved in using M files especially developed and attached for this purpose This adds a unique feature to the book for in depth understanding of the materials sometimes difficult to apprehend mathematically Chapter 1 provides an introduction to Power System Planning PSP issues and basic principles As most of PSP problems are modeled as optimization problems optimization techniques are covered in some details in Chapter 2 Moreover PSP decision makings are based on both technical and economic

considerations so economic principles are briefly reviewed in Chapter 3 As a basic requirement of PSP studies the load has to be known Therefore load forecasting is presented in Chapter 4 Single bus Generation Expansion Planning GEP problem is described in Chapter 5 This study is performed using WASP IV developed by International Atomic Energy Agency The study ignores the grid structure A Multi bus GEP problem is discussed in Chapter 6 in which the transmission effects are somehow accounted for The results of single bus GEP is used as an input to this problem SEP problem is fully presented in Chapter 7 Chapter 8 devotes to Network Expansion Planning NEP problem in which the network is planned The results of NEP somehow fixes the network structure Some practical considerations and improvements such as multi voltage cases are discussed in Chapter 9 As NEP study is typically based on some simplifying assumptions and Direct Current Load Flow DCLF analysis detailed Reactive Power Planning RPP study is finally presented in Chapter 10 to guarantee acceptable ACLF performance during normal as well as contingency conditions This somehow concludes the basic PSP problem The changing environments due to power system restructuring dictate some uncertainties on PSP issues It is shown in Chapter 11 that how these uncertainties can be accounted for Although is intended to be a text book PSP is a research oriented topic too That is why Chapter 12 is devoted to research trends in PSP The chapters conclude with a comprehensive example in Chapter 13 showing the step by step solution of a practical case

IEEE Tutorial on Power Distribution Planning M. V. Engel, 1992 **Long-Term Spatial Load Forecasting Using Human-Machine Co-construct Intelligence Framework**, 2004 This thesis presents a formal study of the long term spatial load forecasting problem given small area based electric load history of the service territory current and future land use information return forecast load of the next 20 years A hierarchical S curve trending method is developed to conduct the basic forecast Due to uncertainties of the electric load data the results from the computerized program may conflict with the nature of the load growth Sometimes the computerized program is not aware of the local development because the land use data lacks such information A human machine co-construct intelligence framework is proposed to improve the robustness and reasonability of the purely computerized load forecasting program The proposed algorithm has been implemented and applied to several utility companies to forecast the

long term electric load growth in the service territory and to get satisfying results *LESCOPE'01* ,2001 This volume covers intelligent systems scheduling load forecasting power system protection power system stability and security and numerical techniques **Conference Proceedings** ,1999 **Modeling and Simulation** ,1984 **Proceedings** Mediterranean Electrotechnical Conference,1998 **IEEE Transmission and Distribution Conference and Exposition** ,1991 **PICA Conference Proceedings** ,1983 Proceedings of the 1991 IEEE Power Engineering Society ,1991
