The Information Technology Revolution and Economic Development Hanna,1993 *An Economic Study of the Information Technology Revolution (Classic Reprint)* Charles Jonscher,2017-01-24 Excerpt from An Economic Study of the Information Technology Revolution Integration As the automated office functions and automated physical production systems within firms become integrated and networked there is a reversal in the trend to separate out the information management tasks from the remainder of the economy Information systems link customers to suppliers and offices to factories In the consequent reintegration of economic activity information technology plays a more central role in the strategy of businesses and the performance of the economy It is a popular conception that the primary driving force behind this information revolution has been progress in microelectronic technology and more particularly in the development of integrated circuits or chips On this view the reason why computing power which used to fill a room and cost now stands on a desk and costs 5000 or why pocket calculators which used to cost 1000 now cost 10 is that society happens to have benefitted from a series of spectacularly successful inventions in the field of electronics As to why the introduction of information technology occurred when it did or took the path that it did why data processing came before word processing or why computers transformed the office environment before they transformed the factory environment the popular conception is silent And since this technology oriented view of the causes behind the information revolution offers little guidance as to the direction which technological developments have taken thus far it offers little insight into the direction which they will take in the future About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Information Technology Ramesh Chandra,2003-08 Many developing countries are in a good position to exploit the opportunities of the technology revolution and advance human development The information and communication technologies provide new resources and material for expanding education The net based education can help access to lived experience as well as dramatise and concretize basic historical facts and knowledge In fact the second half of the twentieth century has witnessed the global phenomenon of an information explosion The development of different electronic technologies has made it possible for millions of people to have fast access to huge information resources stored in
