1. INTRODUCTION

In the new era of information technology, information overload has become a serious problem to those seeking for information online. Manihua Yang, 2022 relate that a tourist needs enough information about the country he wishes to travel. Some specific data required include hotels, destinations, malls, and tourist places, and they are needed before they land on the tourist country. Recently, intelligent search has been employed in the web that suggest that these problems can be partially overcome by providing search engines with more intelligence and with the user's underlying knowledge. (Anastasia, 2017). Such include google.com and another class of intelligent system that has proven relevant in addressing the issue of information overload is the recommender system (Daramola, 2009). In the aspect of tourism, internet and web technologies has made information on tourist accommodations, transportation, shopping, food, festivals, and attractions to be more readily available.
