It is both a pleasure and a privilege to be invited to contribute a foreword to this book which deserves and needs to be read by virtually everyone who is concerned with the treatment and subsequent welfare of the victims of severe injuries of the brain. Some friends, relatives, and workmates might be helped by reading some parts of it, but if the book has the effect it deserves to have on therapists, nurses, doctors, and others working in both hospitals and the community, these laymen will be suitably informed and assisted by one or more members of the necessarily large therapeutic team. The improvements in methods of resuscitation that have taken place during the last 40 years or so have abolished the previously fatalistic readiness to accept that a week or two in coma after a head injury was virtually a sentence to death from pneumonia. After it had become possible to save lives, it gradually became clear that survival of the patient was not necessarily followed by recovery of the brain, and that the price of success in saving lives was a population of cerebral cripples that was increasing.
