The Search For Christian Doppler:

The Search for Christian Doppler Alec Eden,2012-12-06 It is now 150 years ago on 25th May 1842 that the son of a Salzburg ston emason presented a scientific work On the coloured light of the double stars and certain other heavenly bodies at a meeting of the Royal Bohemian Society of Sciences held in Prague Christian Andreas Doppler then professor at the Prague Technical Institute set a milestone in scientific history in the meeting room of the Royal Society in the Charles University just a few meters from the National Theatre where another genius from Salzburg Wolfgang Amadeus Mozart had celebrated his musical triumph with the premiere of his opera Don Giovanni fifty five years earlier Doppler s lecture set out in brilliant simplicity what we now call the Doppler principle which since has found numerous uses in astronomy which was of primary interest to Christian Doppler In addition it has found countless practical applications in physics navigation aeronautics geodesy medicine science and technology In medicine alone Doppler sonography is now an established diagnostic procedure in the fields of childbirth cardiology and diseases of the blood vessels neurology neuro surgery and vascular surgery and is continually finding new medical applications in today s world of high technology

Enchantment Of Urania, The: 25 Centuries Of Exploration Of The Sky Massimo Capaccioli,2024-03-19 Today we know much about the sky how stars are born how they live and die and how the universe as a whole evolves We have learned of the existence of another type of matter indifferent to light and yet decisive for the formation of galaxies and we have a hint of a dark energy that since the last 4 5 billion years has taken over the control of the cosmos We postulated and then discovered and even photographed black holes and listened to the faint rustle of the space time ripple produced when these monsters devour each other We reached these astonishing results recognized by a bunch of Nobel Prizes and filling every day the media with wonders for the eyes and the mind by the marriage of physics and astronomy that unified the Earth with the sky and then by the leap forward of science and technology in the Twentieth Century This rich heritage has ancient roots It was built by accumulating discoveries with errors observations with fantasies myths and superstitions with flashes of genius over a span of millennia since Homo sapiens turning his eyes to the immutable and perfect sky began to ask questions The book is a narration of the answers to these questions that had evolved over time a progressive path inserted in the general history with some second thoughts and many obstacles This is a saga of men and machines where greatness sometimes mixes with misery and passion often borders on sacrifice and even martyrdom Why should we know it Because our current knowledge is the result of these efforts and of the preconceptions that accompanied them The challenge has been to present this complex and intricate subject without resorting to any formulas so that it can be accessible to a wide audience of curious people including high school and university students and in general all those who normally keep themselves informed of scientific things A rich bibliography has also been added in the appendix for those wishing to learn more on one or more topics

Einstein in Bohemia Michael D. Gordin,2020-02-11 Though Einstein is undoubtedly one of the most important figures in the history of

modern science he was in many respects marginal. Despite being one of the creators of quantum theory he remained skeptical of it and his major research program while in Princeton the quest for a unified field ultimately failed. In this book Michael Gordin explores this paradox in Einstein's life by concentrating on a brief and often overlooked interlude his tenure as professor of physics in Prague from April of 1911 to the summer of 1912. Though often dismissed by biographers and scholars it was a crucial year for Einstein both personally and scientifically his marriage deteriorated he began thinking seriously about his Jewish identity for the first time he attempted a new explanation for gravitation which though it failed had a significant impact on his later work and he met numerous individuals including Max Brod Hugo Bergmann Philipp Frank and Arno st Kolman who would continue to influence him. In a kind of double biography of the figure and the city this book links Prague and Einstein together. Like the man the city exhibits the same paradox of being both central and marginal to the main contours of European history. It was to become the capital of the Czech Republic but it was always compared to Vienna and Budapest less central in the Habsburg Empire. Moreover it was home to a lively Germanophone intellectual and artistic scene though the vast majority of its population spoke only Czech. By emphasizing the marginality and the centrality of both Einstein and Prague Gordin sheds new light both on Einstein's life and career and on the intellectual and scientific life of the city in the early twentieth century.

The Story of Stroke Louis R. Caplan, Aishwarya Aggarwal, 2022-12-15 This book tells the full story of stroke through the experiences of many who were eye witnesses to this long process.

The Search for Extraterrestrial Life Don Nardo, 2006 It would be terribly egocentric of humankind to believe that they are the only intelligent life in the universe. Since 1995 scientists have detected more than 120 planets orbiting other stars. They have discovered oceans of liquid water that have been beneath the surfaces of several moons in our solar system. The search for other life continues. This fascinating volume explores the scientific probabilities of extraterrestrial life and current scientific efforts to find it.

The Search for Life in the Universe Donald Goldsmith, Tobias C. Owen, 1992 The authors present the most important facts about astronomy from a uniquely engaging viewpoint how can we find other advanced civilizations. To address the question Goldsmith and Owen provide a fascinating description of the history and structure of the universe and then consider current ideas about the origin and cosmic distribution of life. Their book is an up to the minute account of our understanding of the universe of the likelihood of life throughout the cosmos and of the ways in which advanced civilizations can make contact. World renowned authority on extraterrestrial life Donald Goldsmith gives the reader a solid introduction to the subject and the revision includes new information from all areas of current astronomical research. No science background is required and the mathematics level is high school algebra.
