The Worlds Airliners:

Powering the World's Airliners Reiner Decher,2020-02-28 The first efforts of man to fly were limited by his ability to generate sufficient power to lift a heavier than air machine off the ground Propulsion and thrust have therefore been the most fundamental elements in the development of aircraft engines From the simple propellers of the first airliners of the 1920s and 1930s to the turboprops and turbojets of the modern era the engines used in airliners have undergone dramatic development over a century of remarkable change These advances are examined in detail by aeronautical engineer and author Reiner Decher who provides a layman s guide to the engines that have and continue to power the aircraft which carry millions of travelers across millions of miles each year Reiner Decher also looks at the development of aero engines during the Second World War and how that conflict drove innovation He also explains the nature of wing design and how they provide lift and of the considerations of airflow over their surfaces from the early days of the twentieth century to the present To enable an easy understanding of this intriguing subject Powering the World s Airliners is profusely illustrated transporting readers back to the time of each major development and introducing them to the key individuals of the aero industry in each era After reading this comprehensive yet engaging story of the machines that power the aircraft in which we fly no journey will ever seem quite the same again

The World's Most Powerful Civilian Aircraft Paul E. Eden,2016-12-15 The World s Most Powerful Civilian Aircraft profiles many types from cargo transports and freighters through flying boats passenger airliners and business jets Featured aircraft include the Ford Trimotor Tin Goose one of the great workhorses of early aviation history the supersonic Tupolev Tu 144 Charger and Concorde Cold War competitors in aviation excellence and the most popular passenger aircraft of the present including the Boeing 747 and Airbus A380 Each entry includes a brief description of the model s development and history a profile view key features and specifications Packed with more than 200 artworks and photographs this is a colorful guide for the aviation enthusiast Airliners of the World Len Morgan,1966

bounds of the past With a narrative scope beginning with human origins around 5 million years ago and ending with global communications and the economy and environment in the modern age The Times History of the World is a superb accomplishment The body of the text is a chronological sweep across the history of the world split geographically and thematically In addition historian Richard Overy gives us his opinions in an exclusive extended article which enables him to freely explore the lessons the world has learnt from history as well as the ways in which the world is constantly changing He shows how the world has in a sense become smaller as communications and technology become more and more prevalent but how wars and conflicts poverty and religion can still drive us apart Concluding with thoughts on what will be the dominant factors driving the world in the future Richard Overy gives us a rare opportunity to consider world history in one magnificent sweep BOOK JACKET **American Aviation Daily** ,1955
