Wide Swath:

Research Summaries, 1990 **Geospatial Technologies for Resources Planning and Management** Chandra Shekhar Jha, Ashish Pandey, V.M. Chowdary, Vijay Singh, 2022-05-24 This book focuses on the application of geospatial technologies for resource planning and management for the key natural resources e.g. water, agriculture, and forest, as well as the decision support system (DSS) for infrastructure development. We have seen in the past four decades that the growing complexities of sustainable management of natural resources management have been very challenging. The book has been written to leverage the current geospatial technologies that integrate the remotely sensed data available from various platforms, the precise locational data providing geospatial intelligence, and the advanced integration tools of Geographical Information Systems (GIS). Geospatial technologies have been used for water resources management, employing geomorphological characteristics analysis of river migration patterns, understanding the large scale hydrological process, wetland classification and monitoring, analysis of glacial lake outburst flood (GLOF), assessment of environmental flow, and soil erosion studies, water quality modelling and assessment, and rejuvenation of paleochannels through groundwater recharge. Geospatial technologies have been applied for crop classification and mapping, soil moisture determination using RISAT 1 C band and PALSAR 2 L band sensors, inventory of horticulture plantations, management of citrus orchards, crop yield forecasting, rice yield estimation, estimation of evapotranspiration, and its evaluation against lysimeter and satellite based evapotranspiration product for India to address the various issues of the agricultural system management. Geospatial technologies have been used for generation of digital elevation model, urban dynamics assessment, mobile GIS application at grass root level, planning, cadastral level, developmental planning, and e-governance applications, system dynamics for sustainable development, micro level water resources planning, site suitability for sewage treatment plant, traffic density assessment, geographical indications of India, archaeological applications, and disasters interventions to elaborate various issues of DSS for infrastructure development and management. Geospatial technologies have been employed for the generation and reconciliation of the notified forest land boundaries, and also the land cover changes analysis within notified forest areas, forest resource assessment, management and monitoring, and wildlife conservation and management. This book aims to present high quality technical case studies representing the recent developments in the application of geospatial technologies for resource planning and management. The editors hope that this book will serve as a valuable resource for scientists and researchers to plan and manage land and water resources sustainably.

Observation of the Earth and its Environment Herbert J. Kramer, 2013-03-09 The following listing represents a survey and a short description of Earth Observing Missions in alphabetical order. The listing in Part A considers completed, operational, as well as planned missions on an international scale. Earth observations from space know no national boundaries. A look into past activities is important for reasons of heritage, context, and of perspective. The document is intended for all who want to keep track of missions and

sensors in the fast growing field of Earth observations There cannot be any claim to completeness although a considerable effort was made to collect and integrate all known missions and sensors into this book Earth observation by remote sensing changes our view and perception of the world We begin to realize the global character of remote sensing its multidimensional and complementary nature its vast potential to many disciplines its importance to mankind as a whole Remote sensing permits for the first time in history a total system view of the Earth The view from space toward Earth has brought about sweeping revisions in the Earth sciences in particular in such fields as meteorology oceanology hydrology geology geography forestry agriculture geodynamics solar terrestrial interactions and many others

Design Technology of Synthetic Aperture Radar Jianguo Lu, 2019-08-07 An authoritative work on Synthetic Aperture Radar system engineering with key focus on high resolution imaging moving target indication and system engineering technology Synthetic Aperture Radar SAR is a powerful microwave remote sensing technique that is used to create high resolution two or three dimensional representations of objects such as landscapes independent of weather conditions and sunlight illumination SAR technology is a multidisciplinary field that involves microwave technology antenna technology signal processing and image information processing The use of SAR technology continues to grow at a rapid pace in a variety of applications such as high resolution wide swath observation multi azimuth information acquisition high temporal information acquisition 3 D terrain mapping and image quality improvement Design Technology of Synthetic Aperture Radar provides detailed coverage of the fundamental concepts theories technology and design of SAR systems and subsystems Supported by the author's over two decades of research and practice experience in the field this in depth volume systematically describes SAR design and presents the latest research developments Providing examination of all topics relevant to SAR from radar and antenna system design to receiver technology and signal and image information processing this comprehensive resource Provides wide ranging up to date examination of all major topics related to SAR science systems and software Includes guidelines to conduct ground system designs and analysis Offers coverage of all SAR algorithm classes and detailed SAR algorithms suitable for enabling software implementations Surveys SAR and computed imaging literature of the last sixty years Emphasizes high resolution imaging moving target indication and system engineering Design Technology of Synthetic Aperture Radar is indispensable for graduate students majoring in SAR system design microwave antenna signal and information processing as well as engineers and technicians involved in SAR system techniques

Near-Space Remote Sensing Wen-Qin Wang, 2011-08-03 Near space is defined as the atmospheric region from about 20 kilometer km altitude to 100 km altitude above the Earth's surface It has received much attention in recent years and several types of near space vehicles are currently being studied developed or employed Near Space Remote Sensing Potential and Challenges concentrates mainly on the role of near space vehicles in bridging the gap between satellites and airplanes for microwave remote sensing applications providing a top level system description and aiming to encourage further research Further this book also describes several potential applications

such as passive surveillance reconnaissance and high resolution wide swath remote imaging The book is intended for geographers transportation engineers and other researchers involved in remote sensing development and applications in particular for near space vehicles Wen Qin Wang is an assistant professor at the School of Communication and Information Engineering University of Electronic Science and Technology of China Definition of a Wide Swath SAR C.
