**Current Critical Issues in Environmental Law** Mark J. Bennett, J. Cullen Howe, James L. Newman, 2008

*Low-carbon City and New-type Urbanization* Songlin Feng, Weiguang Huang, Jun Wang, Mingquan Wang, Jun Zha, 2015-01-23 In the face of increasingly serious resource and environmental challenges the world has already accepted low carbon development as the main way forward for future city construction Chinese cities have encountered many problems during their development including land constraints energy shortages traffic congestion and air pollution For this reason the national meeting of the Central Work Conference on Urbanization made the strategic decision to take a new approach to urbanization and indicated that in future the key features of urbanization in China will be low carbon development and harmony between the environment and resources This book discusses the low carbon city as the new pattern of Chinese urbanization This represents a major change and takes intensive land use intelligent green and low carbon as its key words Low carbon will become an important future development direction for Chinese urbanization development In the twenty first Century in response to the global climate change countries have started a wave of low carbon city construction But in China there are still many disputes and misunderstandings surrounding the issue Due to a lack of research low carbon city construction in China is still in the early stages and while there have been successes there have also been failures There are complex and diverse challenges in applying low carbon development methods in the context of today

s Chinese cities The construction of low carbon cities requires efficient government the technological innovation of enterprises and professional scholars but also efforts on the part of the public to change their daily activities Based on the above considerations the collection brings together experts from urban planning and design clean energy systems low carbon transportation new types of city infrastructure and smart cities etc in the hope of forming some solutions for Chinese low carbon city development

**Reinventing Green Building** Jerry Yudelson,2016-04-25 Buildings and their associated systems are the largest source of greenhouse gases in the world The 2030 Challenge aims to produce zero net energy from new North American construction by 2030 while achieving a 50 percent reduction in carbon emissions from existing buildings With less than 4 percent of commercial and residential structures in the United States and Canada certified by 2015 we seem destined to fall catastrophically short of this target Reinventing Green Building combines a unique insider s critique of the current state of affairs with a potent vision for the future This highly visual data driven analysis brings together the wisdom of today s leading practitioners including Up to date information on green building issues energy economics and new technology Dramatic new approaches to certification system design and user experience Creative outside the box solutions using the Internet of Things big data analytics and cloud based technologies for building management The green building revolution has failed to fulfill its promise to transform the marketplace in a meaningful way Smart simple and sustainable Reinventing Green Building presents a new approach to certification designed to radically cut costs while dramatically increasing marketplace acceptance integrating true climate mitigation and better building performance Jerry Yudelson dubbed The Godfather of Green by Wired magazine in 2011 has many years of professional experience in the green building field elected as a LEED Fellow and having served as the president of the Green Building Initiative He is the author of thirteen books in the field including Dry Run Choosing Green and Green Building A Z
