DIGITAL IMAGE PROCESSING AND PATTERN RECOGNITION PAKHIRA, MALAY K.,2011-02 This book is designed for undergraduate and postgraduate students of Computer Science and Engineering Information Technology Electronics and Communication Engineering and Electrical Engineering The book comprehensively covers all the important topics in digital image processing and pattern recognition along with the fundamental concepts mathematical preliminaries and theoretical derivations of significant theorems The image processing topics include coverage of image formation digitization lower level processing image analysis image compression and so on The topics on pattern recognition include statistical decision making decision tree learning artificial neural networks clustering and others An application of simulated annealing for edge detection is described in an appendix The book is profusely illustrated with more than 200 figures and sketches as an added feature **KEY FEATURES** Provides a large number of worked examples to strengthen the grasp of the concepts Lays considerable emphasis on the algorithms in order to teach students how to write good practical programs for problem solving Devotes a separate chapter to currently used image format standards Offers problems at the end of each chapter to help students test their understanding of the fundamentals of the subject

Recent Advances in Differential Geometry and Related Areas Bogdan D. Suceav?,Adara M. Blaga,Marian Ioan Munteanu,Cezar Oniciuc,Shoo Seto,Gabriel-Eduard VCElcu,Lihan Wang,2025-06-24 This volume contains the proceedings of the AMS Special Session on Recent Advanced in Differential Geometry held virtually on April 1 2 2023 and the Tenth Congress of Romanian Mathematicians Special Session on Recent Advances in the Geometry of Submanifolds held on June 30 July 5 2023 in Pite ti Romania In the last two decades various techniques produced new results in differential geometry and many of them focused on the geometry of submanifolds where one of the most important questions the Willmore conjecture was solved in 2012 by A Neves and F Coda Marques This invites a reflection on the new trends and research directions that contemporary differential geometry might and will take in its natural development Some of the most important advances have been obtained by using techniques in geometric analysis while others have been using more classical methods which are still of interest Motivated by these new developments the present volume intends to bring together various viewpoints on the recent study of representing the fundamental idea of space in differential geometry Of particular interest are the results focused on minimal submanifolds and their generalizations and the related concept of harmonic mappings and their generalizations In preparing this volume the editors were particularly interested in the study of curvature functionals in various contexts from comparison geometry to new curvature invariants relations between curvature and topology as well as other related topics
