Spatiotemporal Databases:

Spatio-Temporal Databases Rita de Caluwe, Guy de Tré, 2004-08-12 Spatio Temporal Databases explores recent trends in flexible querying and reasoning about time and space related information in databases It shows how flexible querying enhances standard querying expressiveness in many different ways with the aim of facilitating extraction of relevant data and information Flexible spatial and temporal reasoning denotes qualitative reasoning about dynamic changes in the spatial domain characterized by imprecision or uncertainty or both Many of the contributions focus on GIS while some others are more general or focus on related application fields presenting theoretical viewpoints and techniques that are inspiring or can be adapted for GIS The first part bundles the contributions on advances at the theoretical level also discussing examples and opening further perspectives The second part presents contributions on well developed applications The authors explain how to handle imprecision and uncertainty demonstrating how advanced techniques can help to solve diverse problems related to GIS

Advances in Spatial and Temporal Databases, 2003 **Advances in Spatial Databases**, 1999 **Spatio-Temporal Databases** Marcos R. Vieira, Vassilis J. Tsotras, 2013-10-15 This brief presents several new query processing techniques called complex motion pattern queries specifically designed for very large spatio temporal databases of moving objects The brief begins with the definition of flexible pattern queries which are powerful because of the integration of variables and motion patterns This is followed by a summary of the expressive power of patterns and flexibility of pattern queries The brief then present the Spatio Temporal Pattern System STPS and density based pattern queries STPS databases contain millions of records with information about mobile phone calls and are designed around cellular towers and places of interest Density based pattern queries capture the aggregate behavior of trajectories as groups Several evaluation algorithms are presented for finding groups of trajectories that move together in space and time i e within a predefined distance to each other Finally the brief describes a generic framework called DivDB for diversifying query results Two new evaluation methods as well as several existing ones are described and tested in the proposed DivDB framework The efficiency and effectiveness of all the proposed complex motion pattern queries are demonstrated through an extensive experimental evaluation using real and synthetic spatio temporal databases This clear evaluation of new query processing techniques makes Spatio Temporal Database a valuable resource for professionals and researchers studying databases data mining and pattern recognition
