The New Mathematics:

The New Mathematics Irving Adler, 1958 This book reveals that the concepts of advanced mathematics lie hidden in the elementary mathematics we all learned in school The author brings these concepts out of their hiding places as he traces the steps by which our number system has grown from the ordinary whole we use for counting through integers rational numbers and real numbers to the complex numbers with which the electrical engineer describes an alternating current In this way he shows the familiar origin of such unfamiliar concepts and terms of the new mathematics as groups rings fields vector spaces algebras homomorphisms isomorphisms and homeomorphisms
