

# Probability formula

Probability formulas are used to calculate the probabilities of events

Finding the probability of an event  $A$  happening can be calculated using the formula

$$P(A) = \frac{\text{Number of times } A \text{ occurs}}{\text{Total number of possible outcomes}}$$

$$P(\text{not } A) = 1 - P(A)$$

For mutually exclusive events:  $P(A \text{ or } B) = P(A) + P(B)$

For independent events:  $P(A \text{ and } B) = P(A) \times P(B)$

## **The Probability Factor:**

The Probability Factor Walter Kempley, 1972      The Zondon Robby Charters, 2010-02-21 Ernie didn't mind the weird fantastic dreams at first but he finds it disturbing when they suddenly begin to encroach on real life and then real life begins to take a disturbing turn. But the ultimate twist he discovers a glowing crystal in an archaeological site. From that crystal he realises he's been on a mission since before birth. Seven people born in every corner of the world each has been plagued with doubts, dreams and obsessions since childhood that don't make sense. They each had a twin who didn't share their obsession and made their lives miserable. Ernie Magawan is one of them and is the first to make the self-discovery. He is an alien born in a human body. Though born on earth they are in fact Zondon from a planet clear across the galaxy here on a mission that they must complete. The future of the human race and of the galaxy depend on it. Those memories are awakened through contact with a mysterious green crystal. On awakening Ernie Magawan realises that he must find and awaken the other six. The action adventure takes him on a roller coaster ride from the archaeological site in Egypt where he found the crystal to the streets of Bangkok to the mountains of Afghanistan to Jerusalem to a nuclear silo in North Korea and finally the Golden Triangle. On the way he and his growing team rub shoulders with international terrorists, Neo Nazis, migrant farm workers and a mystic rabbi as well as their ultimate enemy, a formidable creature also from across the galaxy in the guise of a powerful international financier and terrorist boss who has been waiting for them all their lives. Armed with extrasensory powers of mind control as well as access to vast political resources, terrorist organisations and WMDs, their enemy is the hidden hand behind all diabolical conspiracies. Some enemies are so powerful and strategically placed that the only way one can fight them is through Wisdom. And there are times while fighting those enemies one is faced with a choice, a test of one's character. One moves forward by listening to the heart all the while the brain is screaming for the alternative. Should the initial result appear a disaster the brain says I told you so but later one realises that that was exactly the right choice, the test passed with flying colours. An International Suspense Thriller Robby Charters has spent time in about half of the places mentioned in the narrative and did research on the other half. But apart from having been there and done it his biography wouldn't make very interesting reading which is just probably as well. He was born and raised in Thailand and presently lives in Northern Ireland with his Thai-Chinese wife Bless and their son Abie.

**Probabilistic Graphical Models** Daphne Koller, Nir Friedman, 2009-07-31 A general framework for constructing and using probabilistic models of complex systems that would enable a computer to use available information for making decisions. Most tasks require a person or an automated system to reason to reach conclusions based on available information. The framework of probabilistic graphical models presented in this book provides a general approach for this task. The approach is model-based, allowing interpretable models to be constructed and then manipulated by reasoning algorithms. These models can also be learned automatically from data, allowing the approach to be used in cases where manually constructing a model is difficult or even impossible. Because uncertainty is an

inescapable aspect of most real world applications the book focuses on probabilistic models which make the uncertainty explicit and provide models that are more faithful to reality Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs

*Classifying Explosion Prone Areas for the Petroleum, Chemical and Related Industries* W.O.E. Korver, 1995-12-31 The degree of danger in the atmosphere of a hazardous location needs to be determined prior to selecting an acceptable electrical equipment installation If maximum safety is the predominant factor in determining the type of electrical installations the cost of electrical equipment will be extremely high If low cost of electrical installation is the predominant factor safety to personnel and equipment may be unacceptably low It is therefore necessary to find a point of balance at which the cost and safety requirements are both satisfied and acceptable In nine out of ten cases a hazardous location is classified much too conservatively The reason for this conservative approach is a lack of knowledge and a misunderstanding of the actual concept of safety and danger This book provides an in depth understanding of the factors that influence the classification of a hazardous location One factor in combination with one or more other factors will have an impact on the level of danger and its hazardous boundaries These factors and their influences are explained in detail and once their impact is understood the classification of a hazardous location becomes a straightforward procedure

**Highway Noise; a Design Guide for Highway Engineers** Bolt, Beranek, and Newman, Bolt, Beranek, and Newman, inc, 1971 Various methods of assessing noise loudness and noise annoyance are reviewed and explained sources types and intensities of traffic noise are noted typical means of abatement and attenuation are described design criteria for various land uses ranging from low density to industrial are suggested and

compared with the results of previous BBN and British systems for predicting annoyance and complaint and a design guide for predicting traffic noise capable of being programmed for batch and on line computer applications is presented in form suitable for use as a working tool A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology and each element is discussed in detail in the text The text is presented of a tape recording that takes the listener through a series of traffic situations with such variables as traffic distance flow velocity distance outdoors and indoors and presence or absence of absorbers and attenuators
