The Science Of Structure Synergetics:

The Science of Structure H. Haken, 1984 **Self-Organization and Management of Social Systems** H.

Ulrich, G.J.B. Probst, 2012-12-06 Self organization of systems belonging to quite different disciplines has been a central topic of synergetics since its beginning I am therefore particularly pleased that Hans Ulrich and Gilbert Probst have not only undertaken to organize an interdisciplinary meeting on Self Organization and Management of Social Systems but have also edited these articles written by leading scientists after and based upon that symposium While the previous volumes of the Springer Series in Synergetics were mainly devoted to physical chemical and biological systems with only the book by W Weidlich and G Haag dealing with Quantitative Sociology Springer Ser Syn Vo 1-14 the present volume opens a new perspective As the reader will notice the multitude of facets of self organization is well reflected by various authors belonging to different disciplines and representing different schools of thought When such a wide scope of fields ranging from physics to sociology is covered it is not surprising that the existence of a hiatus between sociology and the natural sciences was felt by some participants **A Franciscan Theological-Metaphysical Foundation of Emergence** Alessandro

Mantini, 2024-11-23 This book proposes a broad synthesis of the state of the art regarding the debate on the phenomenon of Emergence Discussing from a theoretical and a theological perspective it aims to propose a new interpretation according to the theological and metaphysical framework offered by St Bonaventure and the Franciscan school Identifying the main concepts the salient and questions that characterize the phenomenon of Emergence the book employs a complex multilevel and wide ranging analysis between the wisdom of Bonaventuran theology metaphysics and modern scientific and metaphysical knowledge This book is a must read for scholars and academics interested in new sapiential depths to extract and make the new and the ancient interact **Synergetics** Hermann Haken, 2012-12-06 The publication of this second

edition was motivated by several facts First of all the first edition had been sold out in less than one year It had found excellent critics and enthusiastic responses from professors and students welcoming this new interdisciplinary approach This appreciation is reflected by the fact that the book is presently translated into Russian and Japanese also I have used this opportunity to include some of the most interesting recent developments Therefore I have added a whole new chapter on the fascinating and rapidly growing field of chaos dealing with irregular motion caused by deterministic forces This kind of phenomenon is presently found in quite diverse fields ranging from physics to biology Furthermore I have included a section on the analytical treatment of a morphogenetic model using the order parameter concept developed in this book Among the further additions there is now a complete description of the onset of ultrashort laser pulses It goes without saying that the few minor misprints or errors of the first edition have been corrected I wish to thank all who have helped me to incorporate these additions **Complexity and Synergetics** Stefan C. Müller, Peter J. Plath, Günter Radons, Armin Fuchs, 2017-11-16 All of us are confronted with complex phenomena occurring in daily life and in the living and inanimate nature surrounding us

Our scientific curiosity strives to unravel the mechanisms at work to create such complexity. Among various approaches to solve this problem, the field of synergetics developed by Hermann Haken has proven very successful as a general and interdisciplinary concept for describing and explaining complex phenomena that appear in systems under non-equilibrium conditions. These comprise dynamical states in evolving systems, spatial structure forming processes, synchronization of states and regulatory mechanisms, and many other examples. The encompassing concepts have been applied to many disciplines like physics, chemistry, biology, and beyond those also from synergetics to information theory, brain science, economics, and others. Starting from basic methods of complexity research and synergetics, this volume contains thirty contributions on complex systems that exhibit spontaneous pattern formation far from thermal equilibrium. Written by international experts and young researchers assembled under one roof, this volume reflects state-of-the-art research from a variety of scientific fields and disciplines where complexity theory and synergetics are important or even indispensable tools today and in the future.

Selforganizology: The Science Of Self-organization Wenjun Zhang, 2015-11-27. This invaluable book is the first of its kind on selforganizology, the science of self-organization. It covers a wide range of topics such as the theory, principle, and methodology of selforganizology, agent-based modelling, intelligence, basis, ant colony optimization, fish, particle swarm optimization, cellular automata, spatial diffusion models, evolutionary algorithms, self-adaptation, and control systems, self-organizing neural networks, catastrophe theory, and methods, and self-organization of biological communities, etc. Readers will have an in-depth and comprehensive understanding of selforganizology with detailed background information provided for those who wish to delve deeper into the subject and explore research literature. This book is a valuable reference for research scientists, university teachers, graduate students, and high-level undergraduates in the areas of computational science, artificial intelligence, applied mathematics, engineering, science, social science, and life sciences.

Great Minds in Regional Science, Vol. 3 Peter Batey, David Plane, 2025-07-31. This book is the third volume in a series on Great Minds in Regional Science which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science. This volume presents, among others, Walter Christaller, Benjamin H. Stevens, William Alonso, and François Perroux. Each chapter combines factual biographical information about the Great Mind, a description of their major contributions, and a discussion of the broader context of their work, as well as an assessment of its current scientific recognition and policy impact. The book attempts to fill a gap in our knowledge and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures.

Imagery Synergetics Peter J. Plath,Ernst-Christoph Haß,Hartmut Linde,2022-05-26 This text will be replaced by the correThis book is aimed to a broad audience of researchers and students who are interested in questions of structure formation in complex systems in nature and society When we think of synergetics impressive images of complex structures immediately come to mind Such images serve us as starting point and guide for understanding structure formation in chemical biological physical geological and social systems Many fascinating pictures of new experimental results illustrate the imagery of synergetics and at the same time enable precise statements about the underlying laws based on precise and discussed measurements In this way for example the famous Runge pictures are accessible to a physico chemical description and it turns out that the well known disintegration of the beer foam satisfies a consecutive kinetics with feedback The modeling by means of cellular automata and iterated function systems enables us to study the cooperative character of pattern formation on sea shells on the one hand but also to show that creativity is a cooperative effect ct back cover text information text as soon as we get it Evolution of Dynamical Structures in Complex Systems Rudolf Friedrich,Arne Wunderlin,2012-12-06 Evolution of Dynamical Structures in Complex Systems is dedicated to the founder of synergetics Hermann Haken on the occasion of his 65th birthday This volume is an attempt to gather together and review the new results and developments achieved by researchers from various fields during the last few years The contents bear witness to the great success in the development of general approaches to synergetic systems as well as remarkable progress in the more traditional fields of synergetics such as lasers and nonlinear optics hydrodynamics condensed matter physics biology and sociology Since their inception the concepts of synergetics and rigorous mathematical theories have been extended to other scientific disciplines such as medicine artificial intelligence and synergetic computers and psychology Here too these ideas have yielded new insights raised unexpected questions and produced innovations in both theoretical and experimental projects The conception of self organization the central theme of Hermann Haken s scientific work has stimulated epistemological studies that draw relations between synergetics and the German romantic Naturphilosophie It is fascinating to observe how these intuitive notions of self organization etc have now evolved into a precise and holistic scientific comprehension of synergetic systems We express our deep gratitude to Dr Angela Lahee from Springer Verlag for her valuable help during the preparation of this book Stuttgart R Frjedrjch March 1992 4 Wunder jn Contents Part I General Approaches On the Principles of Synergetics By A Wunderlin 3 Elements of a Synergetics of Evolutionary Processes By W

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject *Systems sciences and cybernetics* is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of *Systems Theory and Cybernetics* with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic

axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Applied Natural Science Mark D. Goldfein, Alexey V. Ivanov, 2017-03-03 *Applied Natural Science Environmental Issues and Global Perspectives* provides the reader with a complete insight into the natural scientific pattern of the world covering the most important historical stages of the development of various areas of science methods of natural scientific research general scientific and philosophical concepts and the fundamental laws of nature The book analyzes the main scientific trends and developments of modern natural science and also discusses important aspects of environmental protection Topics include The problem of the two cultures the mathematization of natural sciences and the informatization of society The non linear nature of the processes occurring in nature and society Application of the second

law of thermodynamics to describe the development of biological systems Global problems of the biosphere Theory and practice of stable organic paramagnetic materials Polymers and the natural environment Key features include An interdisciplinary approach in considering scientific and technical problems A discussion of general scientific trends in modern natural science including globalization challenges in nature and society the organic chemistry of stable paramagnetic materials the fundamentals of the environmental chemistry of polymeric materials etc A justification of applying classical non equilibrium thermodynamics to studying the behavior of open including biological systems Of particular importance in the book is the discussion of some problems associated with the place of man in the biosphere issues of the globalization of science and technology new ideas about the universe and the concept of universal evolutionism At the same time the book discusses more specific issues related to solving major global and regional environmental problems particularities of organic paramagnetic materials the influence of polymers on the man and environment etc All this leads to the fundamental conclusion of the unity of animate and inanimate nature as well as improvement of the process of cognition of the real world which consists in objective and natural changing of world views The book is intended for professors teachers and students of classical and technological universities who are interested in the development of the foundations of modern natural sciences as well as for professionals working in the field of chemical physics and applied ecology
