Support Vector Machines For Pattern Classification:

Support Vector Machines for Pattern Classification Shigeo Abe, 2005-12-28 I was shocked to see a student's report on performance comparisons between support vector machines SVMs and fuzzy classifiers that we had developed without best endeavors. Classification performance of four fuzzy classifiers was comparable but in most cases inferior to that of support vector machines. This tendency was especially evident when the numbers of class data were small. I shifted my research efforts from developing fuzzy classifiers with high generalization ability to developing support vector machine based classifiers. This book focuses on the application of support vector machines to pattern classification. Specifically we discuss the properties of support vector machines that are useful for pattern classification applications: several multiclass models and variants of support vector machines. To clarify their applicability to real world problems we compare performance of most models discussed in the book using real world benchmark data. Readers interested in the theoretical aspect of support vector machines should refer to books such as 109 215 256 257 *Pattern Recognition with Support Vector Machines* Seong-Whan Lee, Alessandro Verri, 2002-07-29 This book constitutes the refereed proceedings of the First International Workshop on Pattern Recognition with Support Vector Machines SVM 2002 held in Niagara Falls, Canada in August 2002. The 16 revised full papers and 14 poster papers presented together with two invited contributions were carefully reviewed and selected from 57 full paper submissions. The papers presented span the whole range of topics in pattern recognition with support vector machines from computational theories to implementations and applications. *Support Vector Machines for Pattern Classification* Shigeo Abe, 2010-07-23 A guide on the use of SVMs in pattern classification including a rigorous performance comparison of classifiers and regressors. The book presents architectures for multiclass classification and function approximation problems as well as evaluation criteria for classifiers and regressors. Features: Clarifies the characteristics of two class SVMs. Discusses kernel methods for improving the generalization ability of neural networks and fuzzy systems. Contains ample illustrations and examples. Includes performance evaluation using publicly available data sets. Examines Mahalanobis kernels, empirical feature space and the effect of model selection by cross validation. Covers sparse SVMs, learning using privileged information, semi-supervised learning, multiple classifier systems and multiple kernel learning. Explores incremental training, batch training and active set training methods and decomposition techniques for linear programming SVMs. Discusses variable selection for support vector regressors. [Support Vector Machines: Theory and Applications](#) Lipo Wang, 2005-06-21 The support vector machine SVM has become one of the standard tools for machine learning and data mining. This carefully edited volume presents the state of the art of the mathematical foundation of SVM in statistical learning theory as well as novel algorithms and applications. *Support Vector Machines* provides a selection of numerous real world applications such as bioinformatics, text categorization, pattern recognition and object detection, written by leading experts in their respective fields. **Linear Programming Support Vector Machines for Pattern**
