Talking with Computers in Natural Language Eduard V. Popov, 1986-08 Intended for a wide circle of specialists in automated systems Above all however it is intended for those who work on systems for communicating with machines

Talking with Computers in Natural Language Eduard V. Popov, 1986 The growing efficiency and lower prices of computers make it possible to apply them more widely in the economy However the wide use of computers in every day life is hindered by a number of factors which constitute what we shall call the problem of contact or of talking The difficulty is that languages used by computers differ substantially from users languages and are not understood by specialists who are unfamiliar with programming This is why those specialists who use computers need the help of programmers to communicate Since this form of communication has many more or less obvious shortcomings great efforts have been made to find a solution to the problem of contact Two approaches can be distinguished here 1 making the computer language similar to the natural language 2 making the user's language resemble that of computers through formalizing the former This book deals with the first approach We shall consider those systems which make it possible to talk with the user in limited natural language LNL The term natural language NL has been used in the title of this book instead of LNL The reason for not using the term limited natural language is that this term has two meanings 1 a dialect of a natural language 2 a formal language whose operators are expressed by words taken from a natural language e.g. Getting Computers to Talk Like You and Me Rachel Reichman, 1985 This book makes an important contribution to the study of pragmatics and discourse by presenting an explicit and precise computational approach to the complex problem of the structure of discourse Natural Language Input for a Computer Problem Solving System Daniel Gureasko Bobrow, 1964 The STUDENT problem solving system programmed in LISP accepts as input a comfortable but restricted subset of English which can express a wide variety of algebra story problems STUDENT finds the solution to a large class of these problems The thesis includes a summary of other English language question answering systems The linguistic analysis in STUDENT is a first approximation to the analytic portion of a semantic theory of discourse outlined in the thesis STUDENT finds the set of kernel sentences which are the base of the input discourse and transforms this sequence of kernel sentences into a set of simultaneous equations which form the semantic base of the STUDENT system STUDENT then tries to solve this set of equations for the values of requested unknowns If it is successful it gives the answers in English If not STUDENT asks the user for more information and indicates the nature of the desired information The STUDENT system is a first step toward natural language communication with computers Author [unreadable], 2005 21 **Python For Automations** satluciferan, 2025-12-02 Python for Automation Make Your Life Better You didn't pick up this book to learn another programming language You picked it up because your time matters If you've ever felt your focus chipped away by tiny thankless clicks if you've ever stayed late to wrestle a report you'll never read again if you've thought There has to be a better way you're in the right place This is a hands on field guide
