The Structure Of Experience

Anthony O'Hear

The Structure Of Experience:

Emotional Anatomy Stanley Keleman,1985 The Structure of Conscious Experience Lee Roy Beach,2019-08-15 There must exist a point at which the molecular and electro chemical processes that comprise brain function are transformed into rich orderly conscious experience which seamlessly blends the present moment what led up to it and what will follow it This is the stuff of our everyday lives and it raises questions about its organization and how that organization facilitates engagement with the world at large In short what is the structure of conscious experience and what is gained by it being structured that way This book argues that the structure is what is familiarly known as narrative form and that the gain is the ability to communicate about one s experience with oneself and others as well as to make informed predictions about what will happen in the fundamentally unknowable and potentially dangerous future In the latter case because the essence of narrative form is time and causality structuring events from memory the past and from perception the present in narrative form causally implies future events expectations The potential threat the bad or the absence of good of these expected future events can be assessed and if required action can be taken to prevent their occurrence or to diminish their impact The implications about thinking and action and about who we are as individuals are also discussed here **The Structure of Experience** Andrew Y. Lee,2019 System, Structure and Experience Ervin Laszlo,2024-09-02 First Published in 1969 System Structure and Experience offers a basic information flow design capable of accounting for the complex operations of a culturally cognizant and purposive mind consistently with the general relationship of the human organism and its environment By means of the isomorphy of a hierarchically ordered series of circuits a way is opened for resolving the traditional mind body or psycho physical problems The work outlines the design of a self stabilizing and self organizing system shows that it applies to artificial biological as well as cognitive structures and then undertakes to analyze the diverse facets of perpetual scientific aesthetic and religious experience in its terms The interrelation of the two or more such multi level cognitive systems offers insights into the problems of human communication The book is a contribution to the scientific analysis of cognitive experience and promotes the transfer of the traditional domain of an introspectively founded philosophy of mind into the realm of modern system research *The Structure of Perceptual Experience* James Stazicker,2015-03-19 This innovative new collection features six original essays exploring the spatial temporal and other structures that shape conscious perception Includes cutting edge research on an increasingly influential topic in the philosophy of the mind Explores structural differences between the senses and between different theories of perceptual experience Offers innovative new arguments on the philosophy of perception written by leading scholars in the field **In Defence of Cosmopsychism** Khai Wager,2025-10-16 Critically explores cosmopsychism and its relation to cognate approaches such as panpsychism panqualityism and perennialism *Reversal Theory* M. J. Apter,D. Fontana,S. Murgatroyd,2014-02-25 First published in 1985 In the eight years since the publication of the first papers by Apter and Smith outlining the basic principles of the

theory of psychological reversals interest in the theory has grown rapidly So within this book the emphasis is very much upon opening up fresh avenues and interests with a view to stimulating and guiding those psychologists who whether as academics or as practitioners are involved with reversal theory at any level Some of the papers are based upon material presented at the International Symposium on Reversal Theory held under the sponsorship of the Welsh Branch of the British Psychological Society in September 1983 while others have been written specially for this book The topics covered have been carefully selected to give a representative flavour of what reversal theory is currently about **The Philosophical Review** ,1908

Bodies, Actions, and the Structure of Experience Stephen Flusberg,2012 Psychologists have traditionally treated perception and action as separate mental faculties but an emerging view suggests that we perceive the world in terms of how it affords action and that there is significant overlap in the cognitive representations supporting perceptual and motor processes However there are a number of open questions regarding the scope and breadth of this perspective I addressed this issue in three series of experiments designed to illuminate how our everyday physical experiences in the environment can influence organize and constrain our perceptual and cognitive processes If perception and action are dynamically linked in experience do they become dynamically linked in the mind as well In a first set of studies I asked just how deeply our motor experiences penetrate into our perceptual processes Can action representations qualitatively affect what objects we see In Experiment 1 3 participants viewed an action hand prime followed by an ambiguous image and they were biased to perceive an object that was congruent with i e afforded the same action as the primed action In Experiment 4 participants engaged in a real motor action while viewing the ambiguous image In this case they were biased to perceive an object that was incongruent with the motor action being carried out This is the first evidence for a qualitative effect of action representation on object perception The specific pattern of results helps constrain possible underlying mechanisms strongly suggesting that the same representations support both our ability to perceive and plan an action towards an object These findings suggest that our physical motor experiences with objects shapes our ability to perceive those objects Do these physical encounters also constrain our ability to imagine those objects Participants in Experiment 5 were slower to mentally rotate an object that was harder to physically rotate when they engaged in motor imagery This effect disappeared when they used visual imagery however This suggests that our physical motor experiences with an object do constrain our ability to imagine manipulating that object but that we can loosen these constraints by flexibly adopting an alternative imagery strategy Do we only represent the relationships between action and perception when we actively engage with an object e g pick it up or move it or are we more generally sensitive to the contingent relationships between our body movements and the structure of the perceptual information we have access to For example do we represent how our body position relates to the spatial orientation of objects in the world To address this issue I note that in our everyday experiences faces tend to appear upright with respect to both our eyes egocentric reference frame and the world environmental reference frame Further our

movements and body positioning give us access to both types of orientation information In Experiments 6 11 participants performed face processing tasks as they lay horizontally which served to disassociate the egocentric and environmental frames The results revealed large effects of egocentric orientation on performance and smaller but reliable effects of environmental orientation This suggests that we are sensitive to how our body movements co vary with the spatial structure of the visual information we have access to I conclude by suggesting that bidirectional effects of action on perception may be a natural consequence of well established psychological principles such as the power of statistical learning Central to this argument is the realization that our bodies and actions help create the very structure of the world that we experience This suggests that to fully understand any given perceptual or cognitive ability we need to take the role of embodied experience seriously
