Surface Modification Technologies IX T. S. Sudarshan, W. Reitz, J. J. Stiglich, 1996 This collection of papers from the Ninth International Conference on Surface Modification held during Materials Week 95 October 29 November 2 1995 in Cleveland Ohio U S A continues the series of proceedings addressing both processing and characterization related to surface modification Technologies discussed include films coatings and treatments for use in aerospace automotive biomedical chemical industry cutting tool electronic metalworking nuclear and optical applications The 43 papers are organized into the following sections

Surface Modification Technologies, 1998

Surface Modification Technologies X T. S. Sudarshan, Michel Jeandin, 1997 Topics covered include tribology laser processing thermal spray CVD PVD emerging coating technologies diamond films application testing corrosion biomedical coatings ion implantation

Synthesis and Characterization of Diamond-like Carbon Coatings Deposited by Plasma Source Ion Implantation and Conventional Ion Beam Assisted Deposition Processes Brian M. Stout, 1999 Diamond like carbon coatings produced by Plasma Source Ion Implantation PSII and beamline Ion Beam Assisted Deposition IBAD were synthesized and studied Gas pressure and electrical current were used as variables to design four independent PSII test sets Beamline IBAD samples were produced with a pre optimized set of parameters Profilometry measurements showed the films to have thicknesses between 1.4409 and 1.6404 microns and to possess very low roughness averages ranging from 14.3 to 28.3 nm which correlate with substrate surface roughness Atomic Force Microscopy revealed that diamond like carbon crystal sizes varied significantly with chamber pressure Crystals were generally spherical in shape suggesting that films were highly amorphous Microhardness and nanohardness test results showed the hardest films to be greater than 3 times the hardness of untreated steel The elastic modulus of the films measured during the nanohardness test was directly related to film hardness Fretting wear and Pin on Disk tests were performed to quantitatively assess the ability of films to resist wear Fretting wear tests showed a dramatic decrease in friction for diamond like carbon films with friction levels ranging from 10% to 30% of that of untreated steel Pin on Disk tests revealed a significant improvement in wear resistance prior to stylus penetration into the substrate

Advanced Analytical Methods in Tribology Martin Dienwiebel, Maria-Isabel De Barros Bouchet, 2018-10-04 This book presents the basics and methods of nanoscale analytical techniques for tribology field It gives guidance to the application of mechanical microstructural chemical characterization methods and topography analysis of materials It provides an overview of the of state of the art for researchers and practitioners in the field of tribology It shows different examples to the application of mechanical microstructural chemical characterization methods and topography analysis of materials Friction and Wear phenomena are governed by complex processes at the interface of sliding surfaces For a detailed understanding of these phenomena many surface sensitive

techniques have become available in recent years The applied methods are atom probe tomography in situ TEM SERS
