Friction Surface Phenomena G.P. Shpenkov,1995-04-07 This monograph summarises results of research in some surface phenomena observed in mechanical treatment and friction In particular the book is devoted to urgent problems of the science of friction and wear and provides insight into the mechanism of the phenomena that cause on the one hand anomalously low coefficients of friction and wear the so called selective transfer and on the other dramatic damages of the surface layers during sliding hydrogen wear of metals The nature of metal interaction during sliding in selective transfer and hydrogen wear modes is analysed in detail Furthermore results of studies concerned with certain aspects of phenomena appearing in the process of influencing contacting surfaces and with detecting the relationship between the observed characteristics and behavior of investigated materials in the process of mechanical treatment and friction are presented The principle followed is to combine varied experimental facts physical concepts and investigation methods which at first sight appear to be unrelated and using this approach to determine general rules Chapter one provides the reader with a general understanding of fundamental surface phenomena which provide the background to their dynamic interaction in mechanical treatment and under friction Chapter two deals with the laws governing influence of mechanical effects on the surface The third chapter presents the fundamentals of the selective transfer theory under friction Other chapters deal with the possibilities of the Mossbauer electron spectroscopy method widely used in physics for solving tribology problems the influence of external electromotive force sources on contact resistance and friction pairs wear and hydrogen wear of metals under friction

Bonis, Henry Herman Hausner,1966 **Liquid and Vapour Flows in Porous Bodies** N.V. Churaev,2000-03-09 Adopts a completely original approach to the study of processes of mass transfer In contrast to the usual approach based on the concept of continuum media and the theory of heat and mass transfer the topic is considered from a new viewpoint taking into account the heterogeneous dispersal state of porous bodies The author bases his discussion on the theory of surface forces and microhydrodynamic analysis of the processes of mass transport of gases liquids and vapors providing the reader with a systematic account of liquid solid and gas solid interfaces Topics treated in this book include structural peculiarities equilibrium and properties of liquids in porous bodies Various mechanisms of mass transfer are considered including liquid flow in pores and films gas diffusion combined transfer of liquid and vapor convective diffusion in solutions structure formation capillary phenomena and wetting This unique book provides a wealth of information from the former Soviet Union which will be of great interest to chemists physicists and materials scientists as well as industrialists working with a variety of different products in which disperse systems and porous bodies are important Transactions Faraday Society,1919
